PREFACE

In presenting this catalog, our 17th edition, may we ask for it the same cordial reception given our previous editions.

This new catalog is carefully revised and corrected to date and supersedes all former editions.

The articles manufactured by this Company are quoted at prices consistent with their quality of workmanship and material. We endeavor to place before the public the very best that can be produced or obtained, without imitating in shape or design the products of other makers. All our articles are of the most recent standard, with every known improvement.

We are publishing this catalog without prices as, due to constant changes in the labor and material markets, prices are subject to change. A separate price list will be found in the back of this catalog and we shall issue revised price lists from time to time as necessity may demand.

We thank our many friends for their continued good will and patronage which has enabled us to grow and expand and it shall always be our endeavor to give our friends and patrons the best in service and to maintain our reputation for the absolute reliability of our products, which we are proud to state are today regarded as the very highest and best possible to obtain.

THE A. LIETZ COMPANY.

San Francisco, January, 1938.

TELEGRAPHIC CODE

When telegraphing orders our customers will find it convenient to use the code words which will be found opposite the item in our catalog.

Telegraph Address:

THE A. LIETZ COMPANY, 632 COMMERCIAL STREET,
SAN FRANCISCO, CALIF.

Cable Address: CYCLOTOMIC, SAN FRANCISCO, U. S. A.

Use A. B. C., 5th Edition, or A. B. C., 5th Edition Improved, or Bentley's Codes in connection with our private Code Words.

THE A. LIETZ COMPANY

NOTICE

When ordering from catalog please give numbers, the name and size of article. When telegraphing orders use code words for convenience.

Our prices are F. O. B. San Francisco or Los Angeles. Transportation on goods sent on memorandum, or for examination, is at the expense of the customer.

Please be careful to add the county and state to your address, making it, always, as clear as possible.

We make no charge for packing, except on foreign shipments requiring special cases and care. Unless otherwise ordered we shall use our best judgment in the way of shipping, and will prepay transportation if desired, adding amounts to your invoices.

We guarantee all goods sold by us, and any articles which do not prove satisfactory should be returned to us, and we will cheerfully rectify or replace.

It is our policy to please our customers, believing that satisfied patrons are our highest asset.

According to the rules of the Express Companies, a surveying instrument, carefully placed in its case and in a packing box, is shipped as merchandise and charged at "single rate." "Three rates" will be charged if this precaution be not taken. The customer should not omit, therefore, to pay strict attention to this rule and avoid unnecessary overcharges.

Packing boxes for surveying instruments are furnished by us at a nominal rate.

MODERN ENGINEERS' AND
SURVEYORS' INSTRUMENTS

THE A. LIETZ COMPANY

SAN FRANCISCO, U. S. A.

SALES BRANCHES AND AGENCIES

Lietz Instruments and Supplies may be obtained from our stores in SAN FRANCISCO, and LOS ANGELES, also from leading dealers in other cities in the United States, the Philippine Islands, Hawaii, Canada and Mexico.

Our branches carry a complete stock of all Lietz Instruments and Supplies and have in connection a modern repair shop in charge of experienced mechanics especially trained for repairs to Surveying Instruments of all makes and other Scientific Equipment.

LIETZ INSTRUMENTS OF PRECISION FOR ENGINEERS AND SURVEYORS

FOREWORD

The manufacture of American engineer's instruments constitutes an industry of National importance, inasmuch as the construction of them is of specific American origin; which has made it possible from the beginning (in about 1832) to accomplish engineering problems with that amount of speed and obtain results within the limitations of accuracy which characterizes many of our American industrial problems.

It is realized that those American manufacturers who have devoted their efforts to the construction of first-class instruments only have been the pioneers in establishing the standardization of the American engineer's instruments of today.

It is also realized and fully established by experience that the first-class instrument is in any and every instance the most advantageous to use.

Economic efficiency can only be obtained with the use of first-class instruments which are kept in good working condition by keeping them out of the hands of the ordinary mechanic, who frequently attempts to make repairs which can only be executed by the manufacturer.

Lietz Transits, Levels and Alidades are precise, sensitive and strong and assure their purchasers a lasting satisfaction in the field and as an investment.

Quality evidenced since 1882.

REMARKS

We desire to convince our future customers—our old patrons we have long since convinced—that we are building conscientiously upon scientific principles, that every part and detail has been carefully studied to meet the requirements of our engineering fraternity, of the climate, and of all those conditions that influence the shape and character of every feature of the surveying instrument. It must permit of all operations at the

least expenditure of time, it must be compact, it must be light, it must be absolutely accurate, it must be rigid, it must be stable and it must possess strength. And wherever a possible improvement is suggested in any detail, it must be applied at once and tested as to its probable merits, and if it prove of value, no time must be lost in introducing it. These are the principles that have governed the manufacture of Lietz Instruments since the beginning in 1882.

Improvements have always had our attention, without any regard of the expenses incurred in experimenting.

With the object constantly in view to make only the very best article that can be produced, and ever ready to introduce improvements and to experiment with suggestions that may lead to them, our instruments are held at a price that is commensurate with their qualities. Their values are rated by those current among first-class instrument makers; they are *no more*, but they are *no less*. We do not handle cheap goods, and the trade that we are most anxious to please is that *willing to pay a fair price for a first-class article*.

It is our purpose to describe in this catalog only the instruments for which there exists the greatest demand. We are prepared to make changes which individual purchasers may require and to add any special features.

Theodolites of the highest grade and for the most exacting purpose, reading with micrometers to the most refined division are made upon order to any desired shape or design and with every required accessory.

Extra features and adjustments for instruments are listed on pages 44 and 45.

All standard Lietz transits and levels are furnished with base plate and tripod head having a thread $3\frac{1}{2}$ " in diameter, 8 threads to the inch, in accordance with recommendations of the Manufacturers Sub Committee, Bureau of Standards, United States Department of Commerce.

Figuring of Graduations of Horizontal Circles

Customary style. Always carried in stock.

Made to order only.

Figuring of Graduations of Horizontal Circles

Made to order only.

Made to order only.

METHODS OF GRADUATING LIETZ INSTRUMENTS

No. 1

Double vernier reading to 30". Circle graduated to 20'.

No. 2

Double vernier reading to 20". Circle graduated to 15'.

No. 3

Single vernier reading to 10". Circle graduated to 10'.
With one row of figures.

When desired we can furnish double opposite verniers with two rows of figures on limb from 0° to 360° in opposite directions.

AND POPULAR STYLES OF VERNIERS FURNISHED

No. 4

Single vernier reading to 20". Circle graduated to 20'.
With two rows of figures.

No. 5

Folding vernier reading to 20". Circle graduated to 20'.
With two rows of figures.

No. 6

Double vernier reading to single minutes. Circle graduated to 30'.

CIRCULAR DIVIDING ENGINE

Built by The A. Lietz Co. for the Graduating Department

We are in position to regraduate the arcs or circles of all makes of surveying instruments; also sextants, octants, protractors, etc. Prices on application.

SPECIAL FEATURES AND ADDITIONS FOR LIETZ INSTRUMENTS

THE STADIA CIRCLE

This device consists essentially of two graduated scales on the inside circumference of the vertical circle as follows:

"Hor." A scale for reducing inclined stadia readings to horizontal.

"Vert." A scale for determining differences in elevation (Vertical Distances).

Each of these special scales has an index. The left index is marked "Hor." and by it is obtained the multiplier which can be applied to the stadia distance to obtain the horizontal distance. The right index is marked "Vert." and is used to obtain the multiplier which applied to the observed stadia distance obtains the difference in elevation.

The Stadia Circle... **CULTAG**

When fitted to used transit additional charge is made.

THE GRADIENTER

The head of the tangent screw of the vertical arc movement is made somewhat larger, properly silvered and graduated into a number of equal parts on its circumference, the thread of the screw being cut with great precision, so that its revolution may be accurately recorded by the divisions of the micrometer head.

One complete revolution of the screw corresponds to 5/10 of a foot of difference in level in 100 feet. Since the head is divided into fifty parts, it follows that one division equals a difference of 1/100 of a foot in 100 feet. We furnish this with a movable head admitting a zero setting.

Gradienter Attachment to Vertical Motion supplied with movable head which admits zero setting.

Code Word..... **CULPABLE**

STABILITY AND RIGIDITY OF LIETZ INSTRUMENTS

CONNECTING BAR

This is accomplished through the correct design of the various parts and through the use of properly alloyed metals which are treated by a heat process before the finer fitting is done, thus removing all strain. We also have special collimating apparatus whereby we test the completed instrument under various temperature changes to assure stability of adjustments. All clamps and other essential parts are ribbed assuring great strength. The lower clamp and tangent piece has a **connecting bar** which adds materially to stability and rigidity, particularly necessary for angular repetitions. (See cut).

15

LIETZ TELESCOPES

Cross Section of Lietz Telescope with Internal Focusing System.

1. Internal Focusing System

The standard Lietz transits and levels are furnished with the improved Lietz internal focusing telescope. The main tube is one piece closed at one end by the objective lens the position of which remains unchanged in relation to the cross hairs. The focusing is accomplished by moving an auxiliary lens. The other end of the telescope is closed by the eyepiece. This design of construction is practically dust and moisture proof. The moving parts are near the center of the telescope which therefore remains in better balance.

A large objective aperture gives a brilliant image. The Lietz internal focusing telescope has an exceptionally flat field and superior definition. On the Lietz internal focusing telescope the usual instrument constant need not generally be considered since all stadia measurements will give the distance from the center of the instrument directly without having to apply the usual instrument constant ($F+C$); the stadia hair interval on the rod when multiplied by 100 will give the distance from the center of the instrument to the rod and while the constant multiplier (100) varies according to the distance, the error involved is negligible and much less than the error of reading the stadia rod interval.

2. External Focusing System

While the standard Lietz transits and levels are now supplied with the internal focusing telescope we are prepared on special order to furnish Lietz instruments with telescopes having the exterior system of focusing.

CROSS HAIRS

We have superior facilities for setting cross hairs with great precision. The cuts show the different cross hairs we set in our instruments as ordered. When ordering please indicate by number the cross hairs wanted as shown above. Unless otherwise specified we employ No. 1 cross hairs and No. 2 stadia hairs.

NEW DIAPHRAGMS WITH CROSS AND STADIA HAIRS

(Furnished complete with Cross Hair Frame Screws)

	Code Word
New Diaphragm with Cross Hairs only (design No. 1).....	CYCLIC
New Diaphragm with Cross and Stadia Hairs (design No. 2).....	CYCLOM
New Diaphragm with Hairs, Special Design.....	CYCLONE

When ordering Diaphragm with Special Cross Hairs please refer to top of page and state DESIGN NUMBER required.

MODERN ENGINEERS' AND
SURVEYORS' INSTRUMENTS

No. 2

LIETZ 6 1/4-INCH ENGINEERS' PRECISION TRANSIT

Fitted with level and tangent to telescope.

Code Word, **BUGGY**

LIETZ ENGINEERS' TRANSIT No. 2

SPECIFICATIONS

Horizontal Limb—8½ inches diameter at edge of graduation. Graduated on heavy ring of **solid silver**, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to one minute set at about 30" from the line of collimation, with **ground glass shades**. Two fine **spirit levels** graduated on glass, sensitiveness about 60 seconds.

Telescope—11½ inches long. Object glass 1½ in., **INTERNAL FOCUSING**, spiral rack and pinion movement, erecting eyepiece, **MAGNIFYING POWER** 24 diameters, **STADIA HAIRS** fixed, ratio 1:100 reading direct from center of instrument. Spirit level 4½ inches long, graduated on glass, sensitiveness about 30 seconds. Improved **CLAMP** and **TANGENT SCREW** to telescope.

Compass—Numbered in quadrants; graduated to half degrees with **VARIATION RING**. **GOLD PLATED NEEDLE** 4½ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. **FOUR LEVELING SCREWS** of special composition metal with deep threads. **SHIFTING CENTER** to set instrument exactly over given point. Improved **CLAMP** and **TANGENT PIECE** with connecting bar. (See page 15). Tangent screws with counterspring.

Center Mark—On top of telescope for setting transit under point above.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Split-leg. Base Plate and tripod head having a thread 3½" in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb bob, reading glass, sunshade, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 15 lbs. Tripod about 11 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 65 lbs.

Code Word—BUGGY.

Extras for Transit No. 2

For which the additional charge is made. Kindly specify if desired.

	Code Word
Horizontal verniers reading to 30 seconds	CULLYISM
Reversion level vial with protection ring	CULTURE
Full extension tripod in lieu of straight legs	CUMBRANCE
Silk protection bag or hood (waterproof)	CURTAIN
Bottle of fine instrument oil	CUTEX
Inverting eyepiece (made to order only)	CUTWATER

For complete list of features applicable to Lietz Transits see pages 44 and 45.

With U-shaped Standards, Y Bearings, without Compass.
Code Word, **BULLFISH**

No. 5C

Same as No. 5 but with Circular Compass 3 1/2 inches diameter
with Variation Ring
Code Word, **BULLETIN**

LIETZ TRANSIT THEODOLITE No. 5

With U-shaped Standards and Y Bearings

Lietz Transit Theodolite No. 5 has U-shaped standards of improved design, consisting of a one-piece casting. This U-shaped telescope support gives great stability in the upper structure, where lateral rigidity is most essential. The telescope has cylindrical pivots, which rest in wye bearings. This secures great refinement of motion in a vertical plane, and without stress. The telescope is reversible in position and exchangeable in its bearings, which are provided with dust caps and screws to give the necessary friction.

SPECIFICATIONS

Horizontal Limb—6½ inches diameter at edge of graduation. Graduated on heavy ring of solid silver, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to 30 seconds set at about 30° from the line of collimation, with ground glass shades. LIETZ TRANSIT THEODOLITE No. 5E

Lietz Transit Theodolite No. 5E has been constructed so as to obtain the highest amount of stability in the upper structure where lateral rigidity is most essential. **The U-shaped telescope support** is of a superior design, consisting of a one-piece casting with large circular base, which makes a more substantial connection to the upper plate and which also permits of a circular compass with variation ring and a compass needle $3\frac{1}{2}$ inches long. The sectional shape of this piece is of the "even cross" design, a characteristic of Lietz Instruments in all parts where the greatest stability is desirable with the least amount of material and weight.

SPECIFICATIONS

Horizontal Limb— $6\frac{1}{4}$ inches diameter at edge of graduation. Graduated on heavy ring of **solid silver**, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to one minute set at about 30° from the line of collimation, with **ground glass shades**. Two fine **spirit levels** graduated on glass, sensitiveness about 60 seconds.

Vertical Circle—5 inches diameter, graduated on solid silver, double vernier reading to one minute, fitted with removable guard.

Telescope— $11\frac{1}{2}$ inches long, Object glass $1\frac{3}{8}$ in., **INTERNAL FOCUSING**, spiral rack and pinion movement, erecting eyepiece, **MAGNIFYING POWER 24** diameters. **STADIA HAIRS** fixed, ratio 1:100 reading direct from center of instrument. Spirit level $4\frac{1}{2}$ inches long, graduated on glass, sensitiveness about 30 seconds. Improved **CLAMP** and **TANGENT SCREW** to telescope.

Compass—Numbered in quadrants; graduated to half degrees with **VARIATION RING**. **GOLD PLATED NEEDLE** $3\frac{1}{2}$ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. **FOUR LEVELING SCREWS** of special composition metal with deep threads. **SHIFTING CENTER** to set instrument exactly over given point. Improved **CLAMP** and **TANGENT PIECE** with connecting bar. (See page 15). Tangent screws with counterspring.

Center Mark—On top of telescope for setting transit under point above.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Split-leg. Base Plate and tripod head having a thread $3\frac{1}{2}$ " in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb bob, reading glass, sunshade, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 16 lbs. Tripod about 11 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 65 lbs.

Code Word—**BUNTLINE**.

Extras for Transit No. 5E.

For which the additional charge is made. Kindly specify if desired.

THE A. LIETZ COMPANY
SAN FRANCISCO, U. S. A.

MODERN ENGINEERS' AND
SURVEYORS' INSTRUMENTS

No. 5F

LIETZ 7-INCH TRANSIT THEODOLITE

With 7-inch Horizontal Circle and opposite verniers reading to 10 seconds.
Code Word, **BUNTWELL**

LIETZ TRANSIT THEODOLITE No. 5F

The general design and construction of these instruments is the same as that of our transit No. 5E. These instruments have a 7-inch Horizontal Circle with opposite verniers reading to 10 seconds. With two vernier microscopes on swinging arm.

SPECIFICATIONS

Horizontal Limb—7 inches diameter at edge of graduation. Graduated on heavy ring of solid silver, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to 10 seconds set at about 30° from the line of collimation, with ground glass shades, two vernier microscopes on swinging arm. Two fine spirit levels graduated on glass, sensitiveness about 30 seconds.

Vertical Circle—5 inches diameter, graduated on solid silver, double vernier reading to one minute, fitted with removable guard.

Telescope—11½ inches long. Object glass 1¾ in., INTERNAL FOCUSING, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 24 diameters. STADIA HAIRS fixed, ratio 1:100 reading direct from center of instrument. Spirit level 4½ inches long, graduated on glass, sensitiveness about 30 seconds. Improved CLAMP and TANGENT SCREW to telescope.

Compass—Numbered in quadrants; graduated to half degrees with VARIATION RING. GOLD PLATED NEEDLE 3½ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. FOUR LEVELING SCREWS of special composition metal with deep threads. SHIFTING CENTER to set instrument exactly over given point. Improved CLAMP and TANGENT PIECE with connecting bar. (See page 15). Tangent screws with counterspring.

Center Mark—On top of telescope for setting transit under point above.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Split-leg. Base Plate and tripod head having a thread 3½" in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb bob, reading glass, sunshade, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 18 lbs. Tripod about 11 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 80 lbs.

Code Word—BUNTWELL.

Extras for Transit No. 5F.

No. 5G

LIETZ 7-INCH BOUNDARY THEODOLITE

United States Coast and Geodetic Survey Design.
For Triangulation and Boundary Line Surveys.
Code Word, **BURDOCK**

LIETZ 7-INCH BOUNDARY THEODOLITE No. 5G

SPECIFICATIONS

Horizontal Circle—For repeating angles, 7 inches to edge of graduation with two rows of figures 0-360, graduated on solid silver, with opposite verniers reading to 10 seconds of arc. Two vernier microscopes on swinging arm.

Vertical Circle—5 inches to edge of graduation, graduated on solid silver, with two opposite double verniers reading to 30 seconds. Sensitive level attached to vernier arm. Two vernier microscopes.

Telescope—13 inches long, with two interchangeable inverting eyepieces. Magnification 25 and 35 times respectively. Object glass, 1 $\frac{3}{4}$ -inch diameter, clear aperture, prism to eyepiece with two dark glasses, long sensitive level to telescope. Releasable clamp and tangent screw. Cylindrical telescope axis and wye bearings. Striding Level resting on points of contact. Cross Hairs electrically illuminated through the axis of telescope, with emergency oil lamp.

Center—Made of steel fitted in cast-iron starpiece, with three leveling screws and shifting center.

Standard—U-shaped, cast in one piece with wye bearings. Entire instrument constructed so as to give the greatest amount of rigidity and accuracy.

Weight—Instrument, 26 lbs.; tripod, 17 lbs.; two boxes, 26 lbs. For protection and portability the telescope is packed in separate carrying case from the base and standard of the instrument.

Code Word—BURDOCK.

DAVIS SOLAR SCREEN

No. 17D

Davis Solar Screen Attachment for eyepiece of transit.

This permits taking sun observations direct with the instrument telescope. It can be attached to any transit with a vertical circle or vertical arc.

Code Word, **CUSTARD**

Price includes fitting with new instrument.

Prismatic Eyepiece extra.

LIETZ 5 1/2-INCH ENGINEERS' PRECISION TRANSIT

With Level and Tangent to Telescope

Code Word, **BURLAP**

LIETZ ENGINEERS' TRANSIT No. 6

SPECIFICATIONS

Horizontal Limb— $3\frac{1}{2}$ inches diameter at edge of graduation. Graduated on heavy ring of solid silver, two rows of figures $0'$ to $360'$ in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to one minute set at about $30'$ from the line of collimation, with ground glass shades. Two fine spirit levels graduated on glass, sensitiveness about 30 seconds.

Vertical Circle—5 inches diameter, graduated on solid silver, double vernier reading to one minute, fitted with removable guard.

Telescope— $10\frac{1}{2}$ inches long, object glass $1\frac{1}{2}$ in., INTERNAL FOCUSED, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 20 diameters. STADIA HAIR (fixed, ratio 1:100) reading direct from center of instrument. Spirit level $4\frac{1}{2}$ inches long, graduated on glass, sensitiveness about 30 seconds. Improved CLAMP and TANGENT SCREW to telescope.

Compass—Noniused in quadrants, graduated to half degrees with VERNIER RING. GOLD PLATED NEEDLE $3\frac{1}{2}$ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. FOUR LEVELING SCREWS of special composition metal with deep threads. SHIFTING CENTER to set instrument exactly over given point. Improved CLAMP and TANGENT PIECE with connecting bar. (See page 18). Tangent screw with counterspring.

Center Mark—On top of telescope for setting transit under point shown.

Finish—Special Torsion finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Splitting. Base plate and tripod head having a thread $3\frac{1}{2}"$ in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb line, reading glass, watch, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 14 lbs. Tripod about 11 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 25 lbs.

Code Word—BURLAP.

LIETZ TRANSIT THEODOLITE

With 5-inch Horizontal Circle and 4-inch full Vertical Circle.

Code Word, **BULLFINCH**

LIETZ ENGINEERS' TRANSIT No. 11E

WITH "U" SHAPED STANDARDS

This is the same type of instrument as our Nos. 5E and 5F but of a smaller and more portable size. A compact and accurate instrument incorporating the characteristics of construction and stability as obtained in the larger instruments.

SPECIFICATIONS

Horizontal Limb—5 inches diameter at edge of graduation. Graduated on heavy ring of solid silver, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read; double opposite verniers reading to one minute set at about 30° from the line of collimation, with ground glass shades. Two fine spirit levels graduated on glass, sensitiveness about 60 seconds.

Vertical Circle—4 inches diameter, graduated on solid silver, double vernier reading to one minute, fitted with removable guard.

Telescope—8½ inches long, Object glass 1¼ in., INTERNAL FOCUSING, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 18 diameters. STADIA HAIRS fixed, ratio 1:100 reading direct from center of instrument. Spirit level 1½ inches long, graduated on glass, sensitiveness about 30 seconds. Improved CLAMP and TANGENT SCREW to telescope.

Compass—Numbered in quadrants; graduated to half degrees with VARIATION RING. GOLD PLATED NEEDLE 2½ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. FOUR LEVELING SCREWS of special composition metal with deep threads. SHIFTING CENTER to set instrument exactly over given point. Improved CLAMP and TANGENT PIECE with connecting bar. Tangent screws with counterspring.

Center Mark—On top of telescope for setting transit under point above.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Durable and weather resisting.

Tripod—Extension Type. Base Plate and tripod head having a thread 3¼" in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb bob, reading glass, sunshade, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 11 lbs. Tripod about 13 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 65 lbs.

Code Word—BULLFINCH.

No. 12

**LIETZ 4-INCH MOUNTAIN AND
RECONNAISSANCE TRANSIT**

Code Word, **BULLCalf**

LIETZ MOUNTAIN AND MINING TRANSIT No. 12

These instruments have been constructed and are recommended where great portability and lightness are desired. They are in every respect equal to and have all the features of our larger transits. In addition to their portability, this type permits of measuring greater vertical angles, which is often necessary in Mountain and Mining work where the engineer is confronted with steep vertical angular requirements. These instruments are also prepared to receive the side or top telescope for extreme or prime verticals. On account of their accuracy and stability, these instruments can be used for any kind of engineering work.

SPECIFICATIONS

Horizontal Limb—4 inches diameter at edge of graduation. Graduated on heavy ring of solid silver, two rows of figures 0° to 360° in opposite directions; figures inclined in the direction verniers should be read, double opposite verniers reading to one minute set at about 30° from the line of collimation, with ground glass shades. Two fine spirit levels graduated on glass, sensitiveness about 60 seconds.

Vertical Circle—4 inches diameter, graduated on solid silver, double vernier reading to one minute, fitted with removable guard.

Telescope—8½ inches long. Object glass 1½ in., INTERNAL FOCUSING, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 18 diameters, STADIA HAIRS fixed, ratio 1:100 reading direct from center of instrument. Spirit level 3½ inches long, graduated on glass, sensitiveness about 30 seconds. Improved CLAMP and TANGENT SCREW to telescope.

Compass—Numbered in quadrants; graduated to half degrees with VARIATION RING. GOLD PLATED NEEDLE 2½ inches long having highest degree of permanent magnetic force, jeweled center and improved lifting arrangement, watertight and removable cover glass.

Centers—Of hard bronze anti-friction alloys, long tapered and closely fitted they are stout and unyielding. FOUR LEVELING SCREWS of special composition metal with deep threads. SHIFTING CENTER to set instrument exactly over given point. Improved CLAMP and TANGENT PIECE with connecting bar. (See page 15). Tangent screws with counterspring.

Center Mark—On top of telescope for setting transit under point above.

Finish—Special Trencher finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Extension Type. Base Plate and tripod head having a thread 3½" in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Plumb bob, reading glass, sunshade, adjusting pins, dust brush and screw driver, polished mahogany case with lock, key and strap.

Weight—Transit about 9 lbs. Tripod about 13 lbs.

Gross Weight—Transit and Tripod packed securely for shipment in two boxes about 60 lbs.

Code Word—BULLCAMP.

LIETZ ENGINEERS' LEVELS

Lietz levels are manufactured in two different types, which we aim to constantly keep in stock, the **Y-Level** and the **Dumpy Level**.

In the manner of making these instruments, much that has been said of the transit will hold good and need not be repeated.

The three main qualities to be secured in a level are: **stability**, a **sensitive bubble** and a **powerful telescope**.

To secure the first we need only refer to the solid construction of the star shaped casting through which the leveling screws operate. The center, or spindle, is long and is continued through the clamp up to the bar which enables us to bring the center of gravity as near as possible to the tripod head. Great care is exercised in fitting the center to the socket and as these parts are made of the hardest composition, it is utterly impossible to wear them out even through years of constant use. The collars upon which the Y level telescope rests on the Y's are made of the hardest bell metal, are exactly equal in diameter and perfect cylinders. The level bars are strongly ribbed and designed to obtain rigidity and lightness in weight.

The telescope is the improved Lietz internal focusing type fully described on page 16 of this catalog. All standard Lietz levels are furnished with base plate and tripod head having a thread $3\frac{1}{2}$ " in diameter, 8 threads to the inch, in accordance with recommendations of the Manufacturers Sub Committee, Bureau of Standards, United States Department of Commerce.

While it is our desire to list in this catalog only such instruments for which there exists the greatest demand, we are prepared to make changes and to add any special features.

Precise levels of the highest grade and for the most exacting purpose can be made to order.

We invite your particular attention to the Lietz Geodetic Precise Level No. 19G illustrated and described on pages 52 to 53. This instrument combines great accuracy with simplicity and compares favorably in results obtained with the more complicated Precise Levels which sell at considerably higher prices.

MODERN ENGINEERS' AND
SURVEYORS' INSTRUMENTS

No. 19

LIETZ ENGINEERS' PRECISION Y LEVEL
Code Word, BUMBOAT

LIETZ ENGINEERS' WYE LEVEL No. 19

SPECIFICATIONS

Telescope—18 inches long. Object glass $1\frac{1}{4}$ in., INTERNAL FOCUSING, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 32 diameters. Collars of hard bell metal. Spirit level 6 inches long graduated on glass, sensitiveness about 20 seconds. Level housing adjustable vertically and horizontally.

Center—Of hard bronze anti-friction alloys, long tapered and closely fitted. FOUR LEVELING SCREWS of special composition metal with deep threads. Improved CLAMP and TANGENT PIECE with sunsetting bar (see page 15). Tangent screws with counterspring.

Level Bar—Of hard bell metal. Improved ribbed construction designed to obtain greatest strength and rigidity. Wye clips provided with spring plungers to give uniform pressure to telescope collar.

Finish—Special Turcon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Split leg type. Base Plate and tripod head having a thread of $3\frac{1}{2}$ " in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Sunshade, adjusting pins, dust brush and screw driver. Polished mahogany case with lock, key and strap.

Weight—Level about 12 lbs. Tripod about 11 lbs.

Gross Weight—Level and tripod packed securely for shipment in two boxes about 60 lbs.

Code Word—BUMBOAT.

MODERN ENGINEERS' AND
SURVEYORS' INSTRUMENTS

No. 19G
LIETZ GEODETIC PRECISE LEVEL
Code Word, BUMBRAY

LIETZ GEODETIC PRECISE LEVEL No. 19G

An Instrument Combining Great Accuracy with Simplicity

With the Lietz Geodetic Precise Level **quicker** and **more accurate** results can be obtained than with the ordinary wye or dumpy level. This instrument is capable of doing the highest class of work, still is so **simple in construction** and design that it can be used for **all purposes** where a good level is required.

The feature by which this is accomplished consists principally of a micrometer screw for the vertical control of one of the wyes. With this the telescope can be raised or lowered at the eye end with greater speed and accuracy than can be obtained with the leveling screws.

The telescope is carefully pivoted, but can easily be relieved for testing of adjustments, which is done in the same manner as with the ordinary wye level. The adjustments of most precise levels can only be made in the laboratory with specially provided cradle. The Lietz Geodetic Precise Level has all the features of the more costly precise instruments but all adjustments, including the lateral adjustments, can be made in the field if necessary. A mirror is attached for the control of the level bubble from the eye end of the telescope. A circular level attached to the leveling head is for the purpose of leveling the instrument approximately. Through the unique construction of the pivoting arrangement and the fine micrometer screw, this level can readily be set to any reading within two or three seconds of arc. This has been accomplished by the careful grinding to the proper curvature, which together with the nature of the filament gives the bubble a free and rapid motion. The pivoting arrangement of the telescope avoids strain and offers the only correct construction for the control of a sensitive level vial.

SPECIFICATIONS

Telescope—18 inches long, Object glass $1\frac{3}{4}$ in., INTERNAL FOCUSING, spiral rack and pinion movement, erecting eyepiece, MAGNIFYING POWER 32 diameters. Collars of hard bell metal, spirit level 6 inches long graduated on glass, sensitiveness about 15 seconds. Level housing adjustable vertically and horizontally.

Center—Of hard bronze anti-friction alloys, long tapered and closely fitted. FOUR LEVELING SCREWS of special composition metal with deep threads. Improved CLAMP and TANGENT PIECE with connecting bar (see page 15). Tangent screws with counterspring.

Level Bar—Of hard bell metal. Improved ribbed construction designed to obtain greatest strength and rigidity. Micrometer screw for vertical control of one of the Y's with counterspring. The other Y is provided with pivoting arrangement for telescope. Circular level attached to leveling head for approximate leveling.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Tripod—Split leg type, 61 inches long to facilitate reading bubble in mirror. Base Plate and tripod head having a thread $3\frac{1}{2}$ " in diameter, 8 threads to the inch (U. S. Standard).

Accessories—Sunshade, adjusting pins, dust brush and screw driver. Polished mahogany case with lock, key and strap.

Weight—Level about 13 lbs. Tripod about 16 lbs.

Gross Weight—Level and tripod packed securely for shipment in two boxes about 65 lbs.

Code Word—BUMBRAY.

No. 20G

LIETZ PRECISE LEVEL

Design of the U. S. Coast and Geodetic Survey
Code Word, **BURGUNDY**

LIETZ PRECISE LEVEL No. 20G

U. S. Coast and Geodetic Survey Design

The United States Coast and Geodetic Survey Precise Level is of the Dumpy Type, and is designed to meet the demand for an instrument whereby the greatest precision possible in leveling can be obtained. In the construction of this instrument we follow in every respect the specifications of the United States Coast and Geodetic Survey. The use of nickel iron, with coefficient of expansion of 0.000004 per degree Centigrade, in connection with nickel steel with coefficient of expansion of 0.000001 per degree Centigrade, assures of a permanency of adjustment of this instrument under decided changes of temperature. The instrument has a fixed adjustment between the line of collimation and the level. The level is set partially within the telescope and as near as possible to the line of collimation.

Specifications

TELESCOPE—17 inches long, inverting, magnifying power about 40×, object glass, 1¾ inches diameter.

LEVEL TO TELESCOPE—5¾ inches long, chambered, graduated 2-mm. divisions; sensitiveness to 2" arc.

STADIA HAIRS—Set 30 cm. to 100 meters.

MICROMETER SCREW—Has head divided into 100 parts, 100 revolutions to one inch, provided with cam for lifting telescope from micrometer screw when not in use.

WEIGHT—Instrument, about 14 lbs.; tripod, about 19 lbs.; box, about 16 lbs.

Code Word, **BURGUNDY**

SURVEYOR'S UMBRELLAS

These Umbrellas are rattan ribbed so as not to deflect the compass needle. They are light and strong.

LIETZ PLANE TABLE OUTFITS

Lietz Plane Table Outfit consisting of No. 31 Alidade with trough compass No. 34A, No. 34B Lietz Tangent Head Tripod, No. 34F Drawing Board size 24x31 with holding-down thumbscrews, and No. 34L Plumbing Arm and Plummet.

For further description see pages 61 to 72

LIETZ ALIDADES

Lietz Alidades are now made in several forms or modifications to meet the various requirements of the profession. They fill a long-felt want for a high-grade instrument of this kind. The telescope has definition, light and power in a high degree and revolves 180 degrees on its longitudinal axis for adjustment and control of the line of collimation.

GRADUATIONS OF ARC AND VERNIER

The vertical arc is graduated on the periphery and set at an angle for convenient reading of the vernier. The index of the vernier is at 30 instead of 0; therefore all angles as read are positive, eliminating the possibility of error in the notes.

Illustrating graduation of vertical arc, vernier reading to minutes.

Illustrating graduation of Beaman stadia arc, vernier reading to minutes.

THE BEAMAN STADIA ARC

A practical attachment for transits and alidades by which inclined stadia readings are reduced to horizontal or vertical distances using only simple arithmetical computations and without the use of either verniers, tables, slide rules or diagrams.

This device consists essentially of an arc having two graduated scales, the arc being attached to the vertical limb on the transit, and identical with the regular vertical arc on the alidade. The scales are graduated as accurately as the degree scales on the vertical circle and the results obtained are identical with those obtained by the use of tables or formulae.

The stadia arc carries two scales:

V—A scale for determining differences in elevation (Vertical Distances.)

H—A scale for reducing inclined stadia readings to horizontal.

Instead of being graduated in degrees like the vertical circle, the V scale is so graduated that only those angles are used for which differences in the vertical distance, at an observed distance of 100 feet are simple multiples of the rod interval; i. e., those angles for which the function $\frac{1}{2} \sin 2a$ is a simple multiple. The index point of the V scale is 50 instead of zero, so that a direct reading of the scale will show whether the difference in elevation is plus or minus, thus avoiding the possibility of error.

In using the multiple scale, starting with the index point at fifty and the telescope level, each graduation indicates a difference in elevation of one foot at a distance of 100 feet from the telescope. The observer reads the rod interval in the usual manner, then turns the tangent screw until the index line is opposite the nearest line on the V scale and notes the rod reading at the middle cross hair. The difference in elevation between the height of the instrument and the rod reading at the middle cross hair is then computed by multiplying the rod interval by the reading on the V scale minus 50. For example, suppose the multiple scale reads 36 and the rod interval 2.5 feet. The difference in elevation between the height of the instrument and the rod reading will be $(36 - 50) \times 2.5 = -14 \times 2.5 = -35$. Subtracting the rod reading from the elevation thus obtained gives the actual elevation, the entire computation being made mentally in a few seconds, with hardly any practice being required.

The graduations on the H scale give the ratio of the horizontal distance correction to the distance read, expressed as a per cent. The horizontal distance is therefore computed by multiplying the observed distance by the reading on the horizontal scale and subtracting the product from the observed distance. In the above example, the reading on the H scale will be 3, that is 3% and the horizontal distance will be $250 - (.03 \times 250) = 242.50$.

TANGENT MOVEMENT TO VERNIER ARM

A recent improvement consists of a tangent movement to the vernier arm, which permits setting the vernier exactly at index when the telescope level is centered, irrespective of a possible slight tilt of the drawing board, and the subsequent reading of the vertical angle can be recorded directly by one reading of the arc.

THE STRIDING LEVEL

The Striding Level is long and sensitive and has a neat snap arrangement for quickly attaching to the telescope. The collars on which it rests are made of our special hard alloy to insure of long wear. When not in use, the striding level is detached from the telescope and placed on the blade for safe and compact packing.

THE TROUGH COMPASS

Our improved form of trough compass may be mounted on the blade of the instrument or countersunk into the edge of the drawing board. This is carefully constructed. The Magnetic needle is of the same high quality as those in our transits. The case is made water-tight and wind-proof and the lifting arrangement is by means of a lever. Graduated 5 degrees both sides of zero.

No. 30

LIETZ PRECISION ALIDADE

This instrument has been designed for topographic surveying of the highest type. The telescope is inverting and has power, light and definition in a high degree. The instrument is sturdy and light. The level on the vernier arm insures a complete control of the vernier position for vertical angles, regardless of the telescope level. It affords a quick setting by means of the level and assures of greater accuracy and saves time, for the reason that the first reading of the vernier is eliminated.

Dimensions and Weights

Length of telescope.....	15 inches
Diameter of objective.....	1 ³ / ₈ "
Magnifying power.....	35×
Size of blade.....	22 inches long, 3 ¹ / ₂ inches wide
Weight.....	about 8 ¹ / ₂ lbs.

LIETZ PRECISION ALIDADE No. 30

Specifications

Telescope—15 inches long, with clamp and tangent revolving 180° on its longitudinal axis. Object glass 1½ in., EXTERNAL FOCUSING SYSTEM, spiral rack and pinion movement, inverted eyepiece, MAGNIFYING POWER 35 diameters. Cross and stadia hairs fixed, set 1:100.

Striding Level—3½ inches long with improved snap arrangement for attaching to telescope. Graduated on glass, sensitiveness about 30 seconds.

Vertical Arc—Graduated on the periphery on solid silver with vernier reading to minutes. Tangent movement and control level attached to vernier arc.

Alidade Blade—22 inches long and 3½ inches wide, finished on underside with white celluloid paint to prevent soiling of drawing paper. Beveled on both edges, fitted with circular spirit level and finger buttons for conveniently orienting alidade.

Finish—Special Torchon finish developed to reduce the coefficient of expansion and contraction. Dark and durable and weather resisting.

Accessories—Sunshade, dust brush, adjusting pins, screw driver, polished mahogany case with lock, key and strap.

Weight—Alidade about 8½ lbs.

Gross Weight—Alidade securely packed for shipment about 40 lbs.

Code Word—CORDALITE.

LIETZ TRAVERSE TABLES

No. 37

No. 37-A

Lietz Traverse Table Outfits consist of a drawing board 15 x 15 inches which has on the under side a strong brass flange with spring. This flange engages with a plunger clamping screw which passes through the center of the tripod head. This connection firmly holds the board to the tripod when oriented to position. Trough compass with needle about 4 inches long fitted on one edge of drawing board.

TRIPODS FOR LIETZ INSTRUMENTS

Made of selected straight-grained hardwood, well seasoned. Tripod heads are cast of our bell metal and fitted with aluminum protection caps. New style bolts with keeper screws, prevent entirely the loss of the wing nuts.

Our split-leg tripods are so designed and constructed as to secure the greatest amount of steadiness and strength with the least amount of weight. We can furnish these tripods with one extension leg. This admits of all the advantages of the extension tripod as regards set-ups, with, of course, the disadvantage of being less portable.

Our Extension Tripods are very rigid and strong. The double clamps employed act quickly and firmly. They are made of special drawn hard metal and will not break or bend under ordinary use.

TRIPODS

All Tripods for Lietz Engineers' Transits and Levels have a tripod head with threads $3\frac{1}{2}$ " in diameter, 8 threads to the inch.

RHODES REDUCING ARC

Patent Pending

The Rhodes Reducing Arc consists of a simple arrangement of scales on a staff or rod, combined in such a manner that distances, vertically and horizontally, to a point are readily obtained graphically when the slope distance is found by measurement.

Horizontal and vertical distances, representing the base and altitude of a right-angled triangle, are read from scales founded on a movable arc revolving about a center of definite height. The slope distance, which is the hypotenuse, is found on the fixed vertical scale. Revolving the arc and sighting the point on which the elevation is desired determines the vertical angle.

The device can be used equally well for original or final cross-sections, setting slope stakes, reference points from center line, or re-establishing the center line from reference points. A three-man party can efficiently handle the work in mountainous and rugged country.

The instrument replaces the transit in the method of taking cross-sections by slope angles and slope measurements. Weighing less than seven pounds, it has the advantage of being lighter and more portable; it can be instantly set up. The

device eliminates troublesome manipulations and determines elevation and horizontal distances without mathematical calculations, thus reducing possibilities of error.

No. 50

Instrument Complete in
Box with Rod

GREAT TIME SAVER

It is estimated by those who have used it that the work of taking original cross-sections in rough country can be accomplished in one-half the time required by other accurate methods.

The use of the reducing arc in a few weeks will pay its entire purchase price and reduce the cost of cross-sectioning nearly 50 per cent.

No. 50. Rhodes Reducing Arc complete in box with rod and book of instructions.
..... Code Word, **ECARO**

A special booklet fully describing the Rhodes Reducing Arc will be sent on application.

LIETZ STADIA HAND LEVEL

- No. 188.** Lietz Stadia Hand Level, 5½-inch, erecting telescope with focusing screw, magnifying power 5×, with stadia hairs set 1:100. In sewed leather case..... Code Word, **ELECTION**

The Stadia Hand Level has cross and stadia hairs which are focused by moving the eyepiece in or out. The focusing of a distant object is accomplished by rotating the milled head collar. When using the instrument, it is held so that the level bubble is below the telescope. The bubble shows on the reflecting surface, equally spaced on each side of the field of view. When using instrument in subdued light a clear vision can be obtained by holding a piece of white paper or the back of the hand at an angle of about 45° under the bubble.

LIETZ WIZARD-ADJUSTMENT HAND LEVELS

Wizard-Adjustment Hand Levels are the latest development of the Lietz laboratories. These have a simplified, positive and permanent adjustment. The cross line is etched directly on the level vial, which is permanently set in its housing. The Prism is easily removed for cleaning and can be quickly replaced. Adjustment is made more easily and permanently by sliding the prism, which is then rigidly secured by two set screws.

Superior illumination and definition is also obtained.

No. 192

- No. 192.** Square type combination hand and bench Level, 5-inch, in leather case. Code Word, **ELEVATOR**
- No. 192A.** Same as No. 192, but without leather case.. Code Word, **ELEVAU**

LIETZ ABNEY LEVELS AND CLINOMETERS

No. 195PD

No. 195DS. (Old No. 195.) Abney Hand Level, Clinometer and Slope Measure, 5-inch, with arc graduated to degrees 0-90 in both directions with vernier reading to 10 minutes. Also a slope scale 1:1 to 1:10 reading each way. In leather case with belt loop.

Code Word, **ELFFIRE**

No. 195PD. (Old No. 195A.) Same as No. 195DS, but with arc graduated to degrees 0-90 in both directions with vernier reading to 10 minutes, and with a per cent scale from 1 to 100%.

In leather case with belt loop.
Code Word, **ELFLOCK**

TOPOGRAPHIC ABNEY LEVEL

The Topographic Abney Level, as made by us for the U. S. Forest Service, is 6 1/4 inches long and has a 4-inch arc. Arcs can be obtained with various graduations and are interchangeable. The graduations are clear and far enough apart to make the use of vernier unnecessary.

No. 198PD. Topographic Abney Level, arc graduated one side in percent, other side in degrees, in sewed leather case with belt loop.

Code Word, **ELKHEAD**

No. 198PT. Topographic Abney Level, arc graduated one side in percent, other side topographic arc, in sewed leather case with belt loop.

Code Word, **ELKFORK**

The graduations on the topographic arc indicate the difference in elevation in feet for one chain (66 feet) of horizontal distance. If used in connection with topographic trailer tape, described on page 140, chaining is greatly expedited in steep and rugged country.

EXTRA PARTS FOR HAND LEVELS

- No. 190LC** Leather case for hand levels Nos. 190, 191 and 191A.
- No. 191LC** Leather case for hand level No. 191.
- No. 192LC** Leather case for hand level No. 192.
- No. 195LC** Leather case for Abney levels Nos. 195DS and 195PD.
- No. 198LC** Leather case for topographic Abney levels Nos. 198PD and 198PT.
- No. 197A** Object glass for round hand levels.
- No. 197B** Eyepiece glass for round hand levels.
- No. 197C** Prism for round hand levels.
- No. 197D** Half lens for round hand levels.
- No. 197E** Level bubble unmounted.

ANEROID BAROMETERS

In connection with our line of Barometers, Barographs, Thermographs, etc., we desire to call attention to the importance of selecting such articles. We aim to carry only the most reputable makes of these instruments.

With our factory facilities and years of experience we are in a position to offer our patrons the accommodation of testing each individual instrument under pressure and in connection with a standard mercurial barometer, thus assuring our friends of that satisfaction seldom enjoyed when purchasing through other sources.

FIRST QUALITY WATCH FORM ANEROID BAROMETERS

- No. 200.** Gilt Case, open face, $1\frac{3}{4}$ -in., silvered metal dial with altitude scale 3000 feet in 10-ft. divisions. Compensated for temperature. In velvet-lined morocco case.....Code Word, **EPACT**
- No. 200C.** Same as No. 200, but 8000 feet. Altitude scale in 50-foot divisions. In velvet-lined morocco case.....Code Word, **EPAULET**
- No. 200D.** Same as No. 200, but 10,000 feet. Altitude scale in 100-foot divisions. In velvet-lined morocco case.....Code Word, **EPHOD**
- No. 200E.** Same as No. 200, but 12,000 feet. Altitude scale in 100-foot divisions. In velvet-lined morocco case.....Code Word, **EPICTURE**

SECOND QUALITY WATCH FORM ANEROID BAROMETERS

- No. 202C.** Same pattern as No. 200, compensated for temperature, silvered metal dial, with altitude scale to 8000 feet in 100-foot divisions.
.....Code Word, **EPIDILE**
- No. 202E.** Same as No. 202C, but 12,000 feet. Altitude scale in 100-foot divisions.....Code Word, **EPIGRAM**

ANEROID BAROMETERS IN METRIC DIVISIONS

For our export trade we carry the above Aneroid Barometers registering in the metric system at corresponding prices.

ALTITUDE BAROMETERS

No. 205 $\frac{1}{2}$ A

These Barometers are "Direct Reading." The scales have been redesigned so that the altitude scale is in equal divisions, overcoming the difficulty met in the past in that the altitude scales were unequally divided, and as a consequence they had to be used with the zero of the scale at a fixed point and a sum worked out for correct readings, or the scales were made to revolve so the zero could be set at 0 feet. If used in the latter manner the readings were only approximate and grew in error the higher the altitude. With the "direct reading" scale all chances of error are eliminated.

No. 205 $\frac{1}{2}$ A. Altitude Barometer 2 $\frac{3}{4}$ -inch silvered metal dial, aluminum case, altitude scale 5,000 ft. in 20 foot divisions, in velvet lined leather sling case.....Code Word, **EQUATIC**

No. 205 $\frac{1}{2}$ D. Altitude barometer 2 $\frac{3}{4}$ -inch silvered metal dial, aluminum case, altitude scale 10,000 ft. in 50-foot divisions, in velvet-lined leather sling case.....Code Word, **EQUATOR**

AUTO ALTITUDE BAROMETERS

No. 208 $\frac{1}{2}$

These instruments give interesting information and valuable data on heights of hills and mountains encountered on your trips. Evenly-divided scales make the determination of altitudes a simple matter.

When at rest at any one place the instrument can be used to forecast probable weather conditions.

No. 208 $\frac{1}{2}$. Auto Altimeter, 3-inch metal dial, with flange at back for screwing to dashboard. Altitude scale 10,000 ft. in 50-foot divisions.
.....Code Word, **EQUERRY**

PAULIN SYSTEM ALTIMETERS

Paulin Altimeters have no inertia due to friction. They are free from elastic hysteresis or lag. They show without correction for deflection the exact air pressure as accurately as a mercury barometer. They are fully compensated for temperature.

The instruments are so constructed and the scales are so graduated as to be easily and accurately read to a much finer degree than heretofore possible. Altimeter No. 213-A1 is graduated to two-foot intervals, without the use of vernier, and the fine needle readily splits these graduations to enable a very accurate reading in inches.

Reading of the instruments is by a totally different method than heretofore employed, being based on the "zero gauging" method, which enables the operator to attain the greatest accuracy of adjustment. The zero point of the scale is equal to 30" of mercury.

Because of the PRECISION of these instruments, new and extensive fields of utility are opened to them, where heretofore instruments of this kind could not be used.

- No. 213-A1.** Paulin Altimeter, total range 4,600 feet graduated to 2 foot intervals. with barometric scale. Diameter $4\frac{7}{8}$ in., height 2 in., weight 18 oz. In leather case with shoulder strap.... Code Word, **EMILAR**

MAXIMUM AND MINIMUM THERMOMETERS

Self-registering

No. 265

Illustration shows Weather Bureau Maximum and Minimum Set, on Townsend Support in position for reading.

Code Word

- No. 265. Weather Bureau Maximum and Minimum Set consists of maximum thermometer No. 266 and minimum thermometer No. 267 with certificates complete with Townsend Metal Support No. 268.

FALCON

The Townsend Support enables the thermometers to be properly exposed and handily manipulated for resetting.

- No. 266. Maximum Registering Thermometer, Weather Bureau Pattern. Tube is mercury filled, range 20° to 120° F., graduated in 1° divisions, mounted on aluminum scale. Made in accordance with U. S. Weather Bureau specifications. Each in a box, with certificate.

FALCONER

- No. 267. Minimum Thermometer, Weather Bureau Pattern. The plain-front tube is spirit-filled, range 20° to 60° below zero to 120° F., graduated in 1° divisions, mounted on aluminum scale. Made in accordance with U. S. Weather Bureau specifications. Each in a box, with certificate.

FALCONRY

- No. 268. Townsend Support. Brass plate with two studs of unequal height having carriers and locking screws for thermometers. The taller support rotates freely, to permit setting of the maximum thermometer after reading. The shorter support makes a quarter turn, to enable the minimum thermometer to be set. Each in a box.

FALCONTA

No. 279

No. 281

- No. 279. Self-Registering Maximum and Minimum Thermometer. Outdoor temperature range, magnifying glass tubes. The 10" scale is one piece of lacquered brass with flanged edges and protecting hood at top. Designed for wall mounting. Each in a box, with setting magnet.

FALCHION

- No. 280. Self-Registering Thermometer, boxwood, black filled figures, polished on all sides. Scale range 10 to 40 degrees below zero to 120 degrees F. above, 10-inch.

FALLOW

- No. 281. Self-registering Thermometer. Metal scale finished black with white figures. Scale range 10 degrees below zero to 120 degrees F. above, 7¾ inch.

UNITED STATES WEATHER BUREAU STANDARD RAIN GAUGE

No. 320

No. 321 (showing funnel and receiver)

The rain collected by the funnel flows into the receiver, which is of smaller diameter than the funnel and so adjusted that the readings are magnified 10 times. To take reading, insert measuring stick through the funnel into the receiver and note how high it is moistened. The sticks are graduated in 10ths and 100ths of an inch, one inch of rain actually being 10 inches on the stick.

To measure snow, remove the funnel and receiver and after collecting let it melt. Then pour into receiver and measure same as rain. Also measure full depth of snow.

- No. 320. United States Weather Bureau Standard Rain Gauge, 25 inches high, and 8 inches in diameter. Constructed of heavy sheet metal. Receiver and measuring tube of seamless drawn brass tubing; complete with measuring stick. Code Word, **FANION**
- No. 321. Similar to No. 320, but 13 inches high, and receiver 3 inches in diameter, with measuring stick. Packed in cardboard container for shipment. Each. Code Word, **FANTAIL**

EXTRA MEASURING STICKS FOR ABOVE

- No. 320A. Extra Measuring Stick for No. 320. Code Word, **FARAD**
- No. 321A. Extra Measuring Stick for No. 321. Code Word, **FARINA**

LIETZ RAINFALL RECORDER No. 322 IN THE FIELD

LIETZ RECORDING RAIN GAUGE

To meet the demand for an accurate, and yet moderately priced Recording Rain Gauge, we have developed a Rain Gauge in which the Lietz Vertical Water Stage Recorder becomes the recording element. This instrument produces a graph showing the accumulated rainfall during any period of time, the chart indicating clearly its intensity, as well as its volume.

The intake funnel is constructed of heavy copper and is 18" in diameter. The rain received runs through a copper drain pipe into a collector tank, also constructed of copper, which is of a size so as to magnify the rainfall two times. Over this Collector Tank a Lietz Vertical Water Stage Recorder No. 356, or 357 is mounted, and as the rain accumulates a recording pen, actuated by a float in the tank, produces a graph of the rainfall.

The outer housing is constructed of heavy galvanized sheet iron, having a weather resisting lacquer finish.

The charts may be changed daily or weekly depending on the time scale desired.

Intake 18 in. diameter
Total Height 54 in.
Base 20 in. diameter

No. 322-323

LIETZ IMPROVED CURRENT METERS

U. S. Geological Survey Specifications

The new Lietz Current Meters are made after the specifications of the U. S. Geological Survey. Backed by our many years experience in the construction of these instruments, and constant study and observation under the most severe conditions, we are proud to offer this greatly improved Lietz Current Meter, made after the original Price Pattern. The improvements consist of a newly designed yoke, tailpiece of a 2-piece construction so that it can be taken apart for packing, pivot made of hardened and tempered tool steel. The meters will rate at lower velocity and retain rating longer at all velocities. One contact chamber, indicating each revolution, or each fifth revolution of the bucket wheel, with only one rating. The meters are made more durable and of better balanced parts, simple in design, permitting easy access for cleaning of all parts. Supported at one point for either cable or rod suspension, and furnished with new streamlined lead weights, offering low resistance to stream flow. Meters are packed in small mahogany carrying case, with canvas bag for the accessories.

INDIVIDUAL CALIBRATED RATING TABLES

We aim to carry in stock at all times a number of Lietz Current Meters which have been individually rated by the United States Bureau of Standards in Washington, D. C. We also have local facilities for furnishing individual rating tables for Current Meters, either new or old. An extra charge is made covering the fee of the Bureau and the cost of preparing these rating tables, plus express charges. When ordering please indicate which of the following rating tables are desired:

- U. S. Bureau of Standards Individual calibrated Rating Table
for Rod Suspension only.....Code Word, **FIRKILE**
- U. S. Bureau of Standards Individual calibrated Rating Table
for Cable Suspension only.....Code Word, **FIRKIPA**

LIETZ IMPROVED CURRENT METER

United States Geological Survey Specifications

No. 347A. Outfit for Cable Suspension.

The cable method of suspension is used when taking stream flow measurements from an overhead cable-way or bridge.

This Outfit consists of:

Lietz Improved Current Meter as described on page 111 with one contact chamber, indicating each revolution, or each fifth revolution of the bucket wheel, latest U. S. G. S. Specifications.

Suspension Cable. 35 ft. rubber covered, waterproof cable with hook, contact plugs, and binding post connector. Weight hanger with holes to carry meter in three positions.

Telephone Set. Receiver with flexible headband, dry battery with holder and flexible wires with double contact socket connector.

Lead Weight. New streamline model 15 lb. lead weight.

Accessories and Spare Parts. Can of instrument oil, screw driver, extra pivot with adjusting nut and lock screw, weight hanger screws, hard rubber bushing, wading rod adapter.

Mahogany Case. Compact size to hold meter with tail vanes demounted, spare parts, accessories and telephone set.

Equipment Bag. Made of heavy canvas with handles to hold Suspension Cable, Lead Weight and equipment.

No. 347A. Outfit Complete.

.....Code Word, **FISHMONT**

WADING ROD SET FOR ABOVE METER

No. 346P. **Wading Rod Set.** Four lengths of $\frac{1}{2}$ inch nickel plated brass tubing, graduated to 0.1 foot, consisting of three lengths of 2 ft. each and one length $22\frac{1}{2}$ inches. These all screw together with flush joints. The short lower length connects to the meter and all measurements read from the plane of the bucket wheel. Double-end hanger, wading base, screw binding post for upper ends of rods, insulated copper wire and spring clips for attaching wire to rods. All contained in canvas case.

.....Code Word, **FIRTIE**

SEE PRICE LIST IN BACK OF CATALOG

No. 347A

LIETZ IMPROVED CURRENT METER

United States Geological Survey Specifications

No. 347B Outfit for Rod Suspension.

There are two methods of rod suspension for Lietz Current Meter. One method is by means of the rod adopter (See illustration A). When it is desirable to rest the rod on the bottom of the stream the meter is connected to the double-end hanger. This slides along the wading rods and the meter can be clamped to any desired depth. The wading base is attached to bottom of rods. (See illustration B).

This Outfit consists of:

Lietz Improved Current Meter as described on page 111 with one contact chamber, indicating each revolution, or each fifth revolution of the bucket wheel, latest U. S. G. S. Specifications.

Wading Set No. 348P. Four lengths of $\frac{1}{2}$ inch nickel plated brass tubing, graduated to 0.1 foot, in four sections which screw together with flush joints. Rod adopter with clamping nut and double-end hanger and wading base. All measurements read from plane of bucket wheel. Screw binding post for upper end of rods, insulated copper wire and spring clips for attaching wire to rods. All contained in canvas case.

Telephone Set. Receiver with flexible headband, dry battery with holder and flexible wires with double contact socket connector.

Accessories and Spare Parts. Can of instrument oil, screw driver, extra pivot with adjusting nut and lock screw, weight hanger screw, weight pin, hard rubber bushing, wading rod adopter.

Mahogany Case. Compact size to hold meter with tail vanes demounted, spare parts, accessories and telephone set.

Equipment Bag. Made of heavy canvas with handles to hold Meter in Case, Wading Rods Set and Equipment.

No. 347B Outfit Complete.

IMPROVED HOOK GAUGE

Entirely of Metal—Nickel-Plated

Made after suggestions of Messrs. Metcalf & Eddy, Consulting Engineers, of Boston, Mass.

No. 355

- No. 355.** Improved Hook Gauge, made entirely of metal, nickel-plated. Tube two feet long, graduated to feet, 10ths and 100ths, with vernier reading to 1000ths. The hook may be extended 12 inches from within the tube, permitting it to be set to the exact level of the water. Metal plate with holes for attaching gauge to side of flume.
.....Code Word, **FLIRTON**

Improved Metal Hook Gauges like No. 355, but with longer tubes, can be made on special order. Prices on application.

LIETZ VERTICAL WATER STAGE RECORDERS

EXCLUSIVE FEATURES

Lietz Multi-Ratio
Gear Arrangement

Lietz Duplex Clock
Time Arrangement.

Illustrating Lietz Multi-Ratio Gear arrangement. Any one of three different gear ratios instantaneously obtained by merely shifting the gear lever.

After many years of experimental work in the laboratory and in the field, we have developed an improved type of Vertical Water Stage Recorder. Simplified construction and new developments have made possible this superior instrument.

SEE PRICE LIST IN BACK OF CATALOG

LIETZ VERTICAL WATER STAGE RECORDERS

THE RECORDING DRUM

The recording drum, constructed of heavy brass, is positively uniform in circumference. It is 12" high and $18\frac{1}{2}$ " in circumference. By means of an improved ball bearing suspension, friction has been reduced to a minimum.

THE CHARTS

The charts are held to the drum by two spiral stainless steel spring belts. Each chart is slotted on the lower margin and this slot fits over a lug at the base of the drum, preventing slippage and assuring that every chart is placed in exactly the same position on the drum. The engraved portion of the chart is $18\frac{1}{2}$ "x12". The vertical lines represent the time scale, and the horizontal lines represent the height of water level. The different types of charts available are listed on page 124.

THE CLOCK

The clock is a high grade jeweled movement carefully selected to insure uniformity of rate, and powerful enough to drive the recording drum from 10 to 14 days. It is appropriately mounted within the revolving drum where it is effectively sealed against moisture and dust. The two springs of the clock are wound by means of a key inserted through bushings in the top of the drum. Adjustment of the time element is accomplished through a horizontal slot in the wall of the drum. The gear arrangement is equipped with an improved friction sleeve which makes it possible to bring the point of the pen or pencil to its exact position on the chart by merely revolving the drum to the point desired. This is accomplished without either strain or damage to the gears or clock movement and is a great improvement over other methods.

Our basic clock movement is so arranged that the drum will make one complete revolution in eight days. Other arrangements, however, are also obtainable and we can furnish recorders where the drum will make one complete revolution in four days, two days, twenty-four hours or twelve hours.

LIETZ DUPLEX CLOCK

The Lietz duplex clock arrangement is a movement geared for any of the following interchangeable time scales: eight-day and four-day, eight-day and two-day, eight-day and twenty-four hours and eight-day and twelve hours. In using the Lietz duplex clock arrangement, it is only necessary to engage the proper gear to produce the time scale desired. The gear not in use is simply depressed and given a quarter turn where a pin will hold it securely out of contact. **This unique arrangement permits changing from one time scale to another instantaneously, without detaching or attaching any special gears.**

LIETZ MULTI-RATIO GEAR ARRANGEMENT

By means of a very unique gear arrangement, we are prepared to supply Lietz Vertical Water Stage Recorders geared 1:1 and 1:5 and 1:10, it being possible to obtain **all three ratios in one Register by merely shifting a small gear lever and without the need of exchanging gears.** Thus, it is possible to immediately adjust the gear ratio to conditions existing in the field.

This multi-ratio arrangement makes this the universal register, and if purchased with the duplex clock above described it is possible not alone to obtain three gear ratios on one Register, but two time scales as well, all of which is accomplished by merely setting in place the proper gears which are **permanently attached.**

OTHER GEAR RATIOS

Other Registers carried in stock are geared 1:1 and 1:2, and we are prepared to furnish special instruments of any other ratio, or interchangeable ratios to order.

LIETZ VERTICAL WATER STAGE RECORDERS

SEE PRICE LIST IN BACK OF CATALOG

LIETZ HORIZONTAL WATER STAGE RECORDERS

The Lietz Horizontal Water Stage Recorder, for automatically recording the rise and fall of water in reservoirs, lakes, canals, weirs, etc., was originally designed and manufactured by us for the U. S. Department of Agriculture over twenty years ago, and has found wide application. Its simplicity of construction, together with efficiency and moderate price, has created its popularity. We have made improvements from time to time, which have increased its efficiency, and the Recorder as made by us today constitutes the best moderate price device on the market.

The customary ratios which we supply and aim to keep in stock are 1:1, 1:2, 1:5 and 1:10, also a device whereby the pencil movement can be changed and made to travel over the drum in a period of either 1 or 8 days. (See Lietz Duplex Time Water Stage Recorder.) Any other ratio, as well as interchangeable ratios, can also be supplied.

OPERATION

The principle of construction of the Lietz Horizontal Recorder is such that the clock is not made to perform a labor which it was not intended to perform by the manufacturer. The clock movements used in Lietz Recorders have been carefully selected and have jewel bearings to assure uniformity of rate. On the Lietz Horizontal Recorder the clock merely releases a chain to which the pencil carriage is attached. This pencil carriage is drawn across the drum by means of a small weight. The drum is controlled by the float which rests on the surface of the water. This design and simple construction permits of easy operation and assures an accurate and uninterrupted record. The record sheets are easily attached to the drum, both ends being inserted in a narrow slot and fit snugly around the drum. The sheets are of a convenient size so that they may be filed and handled with ease.

INSTALLATION

When Lietz Recorders are shipped, we insert a small strip of paper through the escapement wheel in order to prevent motion and wear during transportation. This piece of paper will first have to be removed. It will be found directly under the cap on the top of the clock case. The pencil carriage chain is then wound around the cylinder on the outside of the clock case. This is manipulated by moving the ratchet wheel with the finger. **Care should be taken that the chain is**

reeled on evenly, one layer only. This is necessary to assure a uniform time record. The pencil carriage is secured to this chain by a small plate and thumb screw and may be adjusted to its proper place on the drum according to the days marked thereon. The chain weight is then attached. This is for the purpose of giving the proper tension; and as the clock releases the chain, this weight helps draw it with the pencil carriage across the drum. The guide rods for the pencil carriage should be kept clean, so as to afford free movement.

Details of installation depend largely upon local conditions. It is generally necessary to provide a box or tube, smooth internally and of sufficient size to allow a free movement of the float.

For the successful operation of mechanical devices, it is necessary that the patrolman or caretaker familiarize himself thoroughly with their peculiarities.

LIETZ HORIZONTAL WATER STAGE RECORDERS

LIETZ DUPLEX TIME HORIZONTAL RECORDERS

The Lietz Duplex Time Recorders are a modification of our No. 360 Water Recorders. By means of attaching an extra gear and reel to the clockworks, the pencil can be made to travel across the drum in a period of either one or eight days. Either result may be obtained as conditions necessitate, by winding the chain, which releases the pencil, on the proper reel.

No. 362. Lietz Duplex Time Recorder, with 12-inch drum, high-grade 8-day clock movement, complete with float, weights and strong galvanized iron hood, 10 record sheets, and directions for installation. Geared 1:1.

LIETZ LEVELING RODS

These leveling rods are of our own manufacture. They are accurate, durable and convenient to handle. Graduated to hundredths by uniform clean divisions, the black numerals corresponding to the tenths have an exact height of 0.06 foot and the red or foot numerals are 0.08 foot high. This affords a rod reading at distances where graduation lines disappear.

Wood—The rods are made of carefully selected, thoroughly seasoned, straight grained maple.

Graduations—The graduations are stamped in the wood from accurate machined steel dies on the Lietz precision linear press, a machine especially designed by us.

Finish—Machined and sanded to assure smoothness in operation, the surface is prepared with a special permanent white lacquer. The entire rod is covered with special weather resisting varnish, nicely rubbed.

Style of Graduation—Lietz rods are manufactured in two self-reading designs known as the block and line graduations.

Target—The target and all connecting parts are cast in one piece of our special hard metal alloy made from virgin metals only. Brass vernier set in flush with face.

Micrometer Target—This feature consists of an arrangement controlled by a small handle placed at the lower edge of the target and permits rapid and accurate setting. Can be operated only before the target is clamped and target cannot therefore be moved accidentally after it has been set with the clamp screw.

Clamping Screws—The clamping screws are so constructed that they cannot fall out and are designed to give efficient service under all conditions.

SAN FRANCISCO 3-PLY RODS

The ideal rod for carrying in an automobile. It is light, portable and convenient to handle. Made with the same care and precision as our Philadelphia type rods.

Wood—Carefully selected, thoroughly seasoned, straight-grained maple.

Graduations—Stamped in the wood from accurate machined steel dies.

Finish—Machined and sanded to assure smoothness in operation. Surface prepared with a special permanent white lacquer. Entire rod treated with weather-resisting finish, nicely rubbed.

Fittings—All hardware fittings are made of heavy drawn brass to withstand unusual wear. Clamping screws are designed to give efficient service under all conditions.

These rods are not furnished with a target.

CHICAGO JOINTED LEVELING AND STADIA RODS

CHICAGO JOINTED LEVELING RODS

These Rods are made of 3 or 4 pieces of selected hardwood, 2 inches wide, 1 inch thick and $4\frac{1}{2}$ feet long. They are joined by telescope socket joints, making when put together a very rigid rod $12\frac{1}{2}$ or $16\frac{1}{2}$ feet long. The face is on one plane and the entire rod from top to bottom when extended is the same size, making it possible to use two targets for stadia work. The graduations are similar to our Philadelphia leveling rods Nos. 421-425 (BLOCK GRADUATION). The feet are marked in red figures and the 10ths in black figures. Each rod contained in a canvas carrying bag.

No. 472-2S

- No. 470A.** Chicago Jointed Leveling Rod, in 3 sections, each $4\frac{1}{2}$ feet long, making a rigid rod $12\frac{1}{2}$ feet long. Without target, in canvas carrying bag.....Code Word, **FORELAND**
- No. 470B.** Chicago Jointed Leveling Rod, in 4 sections, each $4\frac{1}{2}$ feet long, making a rigid rod $16\frac{1}{2}$ feet long. Without target, in canvas carrying bag.....Code Word, **FORELOCK**

CHICAGO JOINTED STADIA RODS

The Chicago Jointed Leveling Rod can be used for stadia work, but the Chicago Jointed Stadia Rod is designed for that purpose only. It is similar to the leveling rod, excepting that it is numbered from the top downward. By setting the upper stadia hair at "O," near the top of the rod, it saves calculation in estimating the distance. By the use of a pair of targets, readings to $1/1000$ of a foot can be made a half mile away. An equivalent to $1/10$ foot horizontally.

- No. 471A.** Chicago Jointed Stadia Rod, in 3 sections, each $4\frac{1}{2}$ feet long, making a rigid rod $12\frac{1}{2}$ feet long, without target, in canvas carrying bag.....Code Word, **FORERUN**

Topographic Trailer Tape

(Slope Correction Tape)

Determine slope by using a topographic level. Reading the slope on the arc, measure two chains on the slope and as many graduations on the trailer as the arc reading shows. This distance measured on the slope represents a horizontal distance of two chains. In similar manner, one chain horizontal distance is determined by using the trailer graduations which appear on back of tape commencing opposite the 1-chain mark.

Used by the United States Forest Service, the Indian Service, etc. A sturdy steel tape and reel. Line $\frac{1}{4}$ inch wide, approximately .020 inch thick. All graduations etched into raised bright portions, except zero, one and two chain points, which are on brass sleeves securely fastened to tape.

Tape 2 $\frac{1}{2}$ -chains (165 feet) long. Graduated first two chains (200 links) to links; remaining half chain carries slope graduations numbered 5 to 50. Similar graduations, numbered 6 to 80 and used for very steep slopes, appear on back of the tape starting opposite the 1-chain point.

Heavy brass end clips, and each tape supplied with a pair of leather thongs. Furnished with or without reel. Line is readily detached from reel. Reel of polished hardwood with folding winding handle and nickel plated mountings.

No.	Length	Code Word
5165T Topographic Trailer Tape with Reel and Thongs	2 $\frac{1}{2}$ chains	GALATA

“MICHIGAN” CHAIN TAPES

Width: $\frac{5}{16}$ Inch. Approx. Thickness: .015 Inch. Markings on Babbitt Metal,
Graduated on Babbitt Metal

The “Michigan” is especially popular in railroad and highway work. Line and reel stand up well in hard service. Line is of extra tough steel, white metal coated. Graduations and figures are deeply stamped into babbitt metal. Line is detachable from reel, has heavy brass end clips, and is furnished with a pair of leather thongs. Sturdy metal reel, in dull nickel plated finish, with polished hardwood handle and long, folding winding handle. Tapes over 100 feet long have 4-arm reel with “D” handle and spike end. Spike aids in holding reel when line is being withdrawn or rewound.

HI-WAY DRAG TAPES

Width: $\frac{5}{16}$ Inch. Approximate Thickness .025 Inch. Etched Markings.

Extra Sturdy and Designed Especially for Highway, Railroad and Similar Work.

A heavy Chain Tape of **special tough steel** and **with extraordinary resistance to wear and tear**. Has "Nubian" Finish. Prominent black lines and figures deeply cut into bright portions of the line which are in high relief, therefore markings most permanent, easy to read and to locate even by touch. Outwears all other Chain Tapes, and markings remain clear even after much dragging of the tape.

"Hi-Way" Tapes have $\frac{1}{2}$ railroad gage mark at $2' 4\frac{1}{4}"$ from zero. Heavy brass end clips. Pair of leather thongs with each tape. Line detachable from reel. Sturdy metal reel in dull nickel plated finish, with polished hardwood handle, large drum, and long, folding winding handle. Tapes over 100 feet long have 4-arm reel with "D" handle and spike end.

Regular Markings One Side Only—Feet only every foot, with end feet in 100ths.

THE "CRIPPLE CREEK" REEL

Aluminum frame 14 inches long; nickel-plated steel reel 8 inches in diameter. A hardwood roller or spool is fitted between the sides or discs of reel which by means of a spring presses toward the axis of reel, causing the tape to wind up evenly and tightly and keeping it in place. Long, neat and strong aluminum winding handle with large metal finger hold, giving a winding leverage of nearly five inches, and enabling the winding of a long tape with exceptional ease and rapidity. A leather strap for carrying is attached to one end of the frame.

The Cripple Creek Reel is the neatest, lightest, most convenient, easiest working, most durable reel for long steel tapes made. Weight, 4½ lbs.

Price of Cripple Creek Reel.....Code Word, **GALVAN**

STAFF FOR CRIPPLE CREEK REEL

Forty inches long, of hard maple wood; aluminum socket with heavy set screw at one end into which the reel fits and is securely fastened. Other end of staff is tapered by means of a heavy brass ferrule and steel point which can be firmly set into the ground. The great advantage of this staff is that it serves as a complete support in winding or unwinding the tape, and when the reel is not in use, the outfit can be conveniently carried over the shoulder. Weight, 2¼ lbs.

This staff is very strong, but light and very convenient.

Price of Staff only.....Code Word, **GALWICK**

THE 1914 REEL

An All-Steel Lock Handle Reel for Chain Tapes

The winding reel is of 7 inch diameter and frame in which it is mounted is 14 inches long over all. The winding handle gives 5 inches leverage, and locks into either end of the frame, thus holding the tape at any point. Hardwood spring tension roller engages the tape, causing it to wind evenly and tightly. This reel is in dull nickel plated finish. It is of medium weight and will withstand severe use.

No. 1914 reel can be used with any of our chains, and is especially recommended for the longer lengths and the babbitt tapes. Made in three capacities, varying only in width.

"ATLAS" OIL GAGING STEEL TAPES WITH PLUMB BOB

$\frac{1}{2}$ Inch Wide. Sturdiest and Best of All Gaging Tapes.

Extra Heavy
Steel Tape

With Pointed
20-Ounce Plumb Bob

The tapes shown on this page have been especially designed to meet the demand for a practical oil gagers' steel tape, and one that will withstand a great deal of hard usage. The steel line, which is considerably heavier than used in our regular tapes, is mounted on a strong metal frame of special design and is fitted with a round plumb bob $6\frac{3}{4}$ inches long with tapering point and weighing 20 ounces, which is a weight sufficient to penetrate the heaviest of oils such as those that accumulate an asphalt deposit, etc.

Fitted with a lock handle which folds over the tape, enabling one to stop and hold it at any desired length, and as this handle is extra long and winding drum extra large, it affords increased winding leverage, which, together with the large knob, makes it especially convenient and easy winding. The length of the bob is included in the markings on the tape and the bob is so attached that it can be quickly removed when not in use. Handle of frame is made of hardwood and is nicely polished.

STAINLESS STEEL TAPES

RUST PROOF

NON-CORROSIVE

STAINLESS TAPES ARE IDEAL FOR USE WHEREVER CONDITIONS COMMONLY CAUSING RUST OR CORROSION ARE PRESENT

The lines in these tapes are of standard weight and of Genuine Stainless Steel, rust proof and non-corrosive. This material also is of suitable temper for tapes, in that respect closely approaching ordinary tape steel. Our Stainless Steel Tapes hold their shape well, far better than lines made of other rust proof materials such as phosphor bronze and monel metal. The tapes below have Instantaneous Readings, and "Nubian" Finish, aids to accurate and quick reading.

The cases are of selected genuine leather, hand-stitched, and with substantial plated steel liners. Folding flush handle is opened by pressing pin on opposite side. Trimmings nickel plated. Measurements guaranteed accurate.

NOTE:—We can supply $\frac{3}{8}$ " and $\frac{1}{2}$ " wide Stainless Steel Tapes also in "Reliable" pattern leather cases, and in metal arm frames. If interested ask for quotations.

INSTANTANEOUS READINGS

Instantaneous Readings, a patented system of marking steel and metallic tapes, consists of repeating the foot marks at every inch in small, yet easily distinguishable figures. Thus the total reading is brought directly before the eye, eliminating all chance of possible error, and saving valuable time.

SEE PRICE LIST IN BACK OF CATALOG

ENGINEERS' PATTERN (Extra Weight) STEEL TAPES

(Tape Thickness—Approximately .015 Inch)

$\frac{1}{4}$ Inch Wide

An engineers' sturdy tape and leather case; line 25% heavier than standard weight engineers' tapes, giving extra durability. Convenient to carry.

Line of highest grade tape steel, distinctly marked, with zero point at extreme end of tape. It is readily removed from case and is supplied with two detachable finger rings. It has "Instantaneous" Readings and "Nubian" Finish. Measurements guaranteed accurate.

DRAWING PAPERS

We deem it unnecessary to make much comment on an article so universally used. The draftsman has learned of its qualities from his earliest experiences, so we only desire to assure our friends that the papers we carry represent the standards of excellence for the respective purposes for which they are intended.

No. 999. AMERICAN WATER COLOR PAPER. Rough surface made especially for water color work. A very reliable yet inexpensive paper. The heavy body of this stock will withstand unusual abuse and heavy water color washes.

REV	ALTERATION	MADE BY DATE				

The constantly increasing demand of the larger drawing rooms for standard sizes of tracing cloth and tracing paper sheets has induced us to cater to this requirement. We have executed any number of intricate jobs and our experiences are offered the profession with the assurance that highly satisfactory results will be had if this work is entrusted to us. Special non-smearing and absolutely opaque ink used.

We call attention to the illustration above. Note that the printed headings are absolutely in line with the horizontal rulings, also that the lines are unbroken and joined perfectly, an accomplishment unattainable unless executed in our special manner. Sheets printed on the under or reverse side, if desired, to allow for thorough erasing or cleaning without danger of destroying the printed matter.

Considering the time required for ruling borders and inserting corner titles and the saving of material, printed sheets are both efficient and economical. Let us quote you, regardless of size, quantity or intricacy of composition.

TRACING CLOTH REQUISITES

BLUE PRINT PAPERS

We use only the purest chemicals and guarantee every yard.

Your attention is directed to the various printing speeds with which we prepare our papers. When ordering kindly state which of the following solutions is desired:

Regular—This is for slow printing. Time of exposure about 4 minutes in bright sunlight. Keeps fresh for months.

Rapid—Time of exposure about 1 to 1½ minutes in bright sunlight. Next to regular printing gives best contrast.

Extra Rapid—Time of exposure about 30 to 40 seconds in bright sunlight. For use in cloudy weather and electric blueprinters.

Special Electric Rapid—Time of exposure about 20 to 30 seconds in bright sunlight. Especially prepared for use in electric blueprint machines.

Double Electric Rapid—Time of exposure about 10 to 20 seconds in bright sunlight. The fastest and most sensitive paper made. Especially suited in electric blueprint machines using mercury vapor lamps.

No. 1180. "APOLLO" Blue Print Paper, Medium Thick. A good strong paper, in the bath and out, for general printing. Rich blue tone, will wash pure white.

DIRECT BLACK LINE PAPERS AND CLOTHS

The Tioga Direct Black Line Papers and Cloths will produce perfect black line prints on a white background. The paper is exposed in the same manner in which blue prints are made. No negative is required. The exposed prints are developed by applying a thin film of developing solution to the exposed surface of the paper. No further washing or drying is required. The developing solution may be applied by hand with a damp sponge or cotton.

DIRECT POSITIVE PRINT PAPERS AND CLOTHS

The Ozalid process and sensitized materials provide a variety of results not available in any other direct printing process. There are four standard emulsions which produce black, blue, maroon or sepia lines on white paper, transparent tracing paper, tracing cloth and opaque cloth. The development is dry by means of aqua-ammonia vapor and all prints are true to scale of the original. The Ozalid process not only provides a simple economical method of producing positive prints having overcome all the shortcomings of the earlier direct printing processes but Ozalid positive prints are made more quickly than the old-fashioned negative blue prints.

PROCESS PRINTING & MAP MOUNTING

We have every facility for the prompt duplicating of drawings and tracings. Work entrusted to us will receive most careful attention.

BLUE PRINTS—White lines on blue background. Made on light, medium or heavy paper or on cloth.

BLUE LINE PRINTS—Blue lines on a white background. Made on paper or cloth same as blue prints.

BROWN PRINTS OR NEGATIVES—White lines on dark brown backgrounds. Made on thin paper for use as negatives for making positive brown line or blue line prints.

BROWN LINE PRINTS—Brown lines on white background. Made from negatives on medium and thin papers or on cloth.

OZALID PRINTS—Black, blue or maroon lines on creamy white background. On thin, medium or heavy paper or cloth.

BLACK LINE PRINTS—Black lines on white background made directly from tracings.

LITHOPRINTS—Exact reproduction of original tracings on tracing cloth, drawing cloth or papers of any desired thickness. Sections of maps may be joined and lithoprinted as one and parts may be blocked out and new work added. A dry process and all shrinkage is eliminated.

PHOTOSTAT NEGATIVE PRINTS—White lines on black background. Made on medium weight photographic paper.

PHOTOSTAT POSITIVE PRINTS—Black lines on white background. Made from photostat negatives, or other negatives.

Samples and prices on any of the above processes will be gladly furnished on request.

LIETZ SINGLE CONTROL VACUUM PRINT FRAME

Improved patented mechanical movements.

The Lietz Single Control Vacuum Frame is of the latest improved design. All clamping bars open and close simultaneously. The control mechanism is easily operated and highly efficient. Adapted for both electric and sunlight exposure, its quick, simple operation speeds production and facilitates greatly the handling of work.

These frames are manufactured in our own factory. They are constructed of laminated hardwood with overlapping and interlocking corners. They are extremely rigid and entirely without twist, even in the larger sizes. This rigidity, with the resilient power application, is a very important item to consider—especially in the larger frames as it prevents glass breakage.

Through patented, correctly designed mechanical movements, equally distributed pressure is applied to the clamping bars giving maximum vacuum efficiency. All rotating shafts and spindles are mounted in sleeves and ball bearings and are entirely enclosed.

Vacuum contact is obtained by means of a vacuum pump connected by hose to a specially designed rubber pad having pliable rubber beading with molded corners (not mitred cemented corners).

These frames are made to be used in conjunction with our portable carriage and track for sunlight exposure or may be mounted on stationary standards for arc lamp or artificial light exposure. With either equipment, the frame rotates through a complete circle. The Lietz improved brake mechanism permits locking positively and quickly in any position.

PLATE GLASS FOR VACUUM PRINT FRAMES

We will furnish polished Plate Glass for the above frames at regular market prices but recommend that, due to the cost of packing, shipping and insurance, this be purchased locally.

VACUUM OUTFIT

For use with Lietz Single Control Vacuum Print Frames

The Lietz Vacuum pump is of the Rotary type direct connected to a motor, mounted on baseboard with snap switch for either direct or remote control. Rotary pumps are known for their efficient and noiseless operation. There are very few moving parts and if properly lubricated will last indefinitely.

No. 1278A. Vacuum Outfit, consisting of Rotary type pump direct connected to $\frac{1}{4}$ H.P. 110 volt 50 or 60 cycle A. C. current motor, mounted on baseboard with snap switch, for frames having a printing surface 44x74 or less.

.....Code Word, **KAGADRO**

No. 1278B. Vacuum Outfit same as No. 1278A but with $\frac{1}{2}$ H.P. motor, for frames having a larger printing surface than 44x74.

PEASE MODEL "7" CONTINUOUS BLUE PRINT

Will make prints up to and including 42 inches in width and of unlimited length.

The feeding operation is very convenient and is expedited by the horizontal span of the endless fabric belt extending a full 5 inches ahead of the point of contact with the curved glass. Uniform illumination is provided by an arrangement of mercury vapor tubes mounted in close proximity to the curved section of the polished plate contact glass. All tubes are interchangeable and independently mounted.

The Pease Model "7" Blue Printer can be equipped with either 3 or 4 mercury vapor tubes. The 3 tube machine has a printing speed of 2 feet per minute and the 4 tube machine a printing speed of $2\frac{1}{2}$ feet per minute. The printer is driven by a sturdy variable speed motor and all speeds are controlled by a 28 point rheostat located at the right hand side of the machine. The speed ranges from

4 inches per minute to 60 inches per minute. Separate switches are provided for the motor and each mercury vapor tube. The machine has an extension cord and detachable plug and can be connected into any electrical circuit.

The Pease Model "7" Continuous Printer is sturdily constructed entirely of metal with rigid steel framework and finished overall with 2 coats of olive green baked enamel except the steel feed table which is finished with 2 coats of black dull finish baked enamel. Shipped as one complete unit with the exception of the mercury vapor tubes which are packed separately.

WICKES SIMPLEX BLUE PRINTER

Continuous Electric Operation

CROSS SECTION ILLUSTRATING CYCLE.

This machine is ideally suited for use in drafting rooms, manufacturing plants and educational institutions. It offers automatic and continuous production of blueprints, Ozalid prints, negatives and other direct process prints from tracings either in continuous rolls up to 46 inches in width or separate sheets. The Wickes Simplex Blue Printer has a capacity of 1800 square feet per 8 hour day using our rapid printing papers. The feed is one plain endless belt surrounding a pyrex cylinder driven by a motor of ample horsepower. The machine starts instantly. There are no gears or belts to shift and an experienced operator is not necessary. The light is obtained from a standard mercury vapor lamp. The weight of the Wickes Simplex Blue Printer is only 220 lbs. It occupies a floor space of 22 inches by 68 inches and is 11 inches high. Total current required is 5 amperes, 110 volt.

Code Word

No. 1300. Wickes Simplex Blue Printer complete with motor, mercury vapor lamp and all equipment. **KAMACK**

Approximate domestic shipping weight: 375 lbs.
Boxed for export: 425 lbs.
Extra charge for export boxing: \$10.00.

WICKES SIMPLEX PRINTER AND OZALID DEVELOPER COMBINED

This machine makes available to mines, manufacturers, schools, engineering and architects' offices all of the many advantages of the Ozalid processes. The Ozalid Developer is mounted directly on a Wickes Blue Printer. It is small, compact and very economical in operation and completely develops Ozalid sensitized materials up to 42 inches in width at a speed of 32 inches per minute. It is equipped with a ventilator pipe and exhaust blower for removing from the machine and the surface of the developed prints all excess ammonia fumes thereby preventing the escape of the ammonia fumes into the room where the equipment is in use. The developer operates from a base plug and is wired for 110-115 volts A. C. 60 cycles single phase. Other currents available at small additional cost.

STANDARD CONTRACT DOCUMENTS OF THE
AMERICAN INSTITUTE OF ARCHITECTS

These Documents have received the full approval of the Institute, through its Conventions, Board of Directors and Officers. They are the outcome of continuous work of many years by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law, and aided by representatives of the leading construction interests in the United States.

The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, the National Association of Sheet Metal Contractors of the United States, The National Electrical Contractors' Association of the United States, the National Association of Marble Dealers, the Building Granite Quarries Association, the Building Trades Employers Association of the City of New York, and the Heating and Piping Contractors National Association.

DRAWING INSTRUMENTS

FACTS TO BE CONSIDERED IN SELECTING

The *varieties* and qualities of drawing instruments are now so numerous and the finish in all so very similar, even though the intrinsic values are far greater in some than in others, that it is sometimes difficult to grasp the actual and comparative values of an instrument.

The *quality* can be determined only by the efficiency and durability of the instrument in actual use. The life and efficiency of drawing instruments depend entirely upon the qualities of the materials or metals employed in their manufacture and *not on the finish*; upon careful and conscientious workmanship and on their design and general form. Our stock includes a variety of instruments that will fully meet all requirements of the professional man and the student.

DESCRIPTION OF THE VARIOUS GRADES

Zenith Drawing Instruments—Neither labor or expense has been spared to produce these instruments of super quality. The materials employed are the finest cold-rolled nickel-silver and the highest grade tool steel. They are made to exacting specifications by skilled workmen and are superior in fitting, balance, precision and design. The pens are constructed of a special hard steel properly tempered to give long service under hard usage. The instrument cases are of genuine leather lined with the best silk velvet.

Peerless Drawing Instruments—These instruments are the highest grade in the flat type. They are constructed of the finest nickel-silver and tool steel cold-rolled to extreme hardness. Each instrument beautifully finished and highly polished. By reason of the special construction of the ball joint and the straightening device, the compasses and dividers never become loose or work unevenly. The pens are of the finest quality steel and unequaled for their extreme hardness and toughness. The threads of the adjusting screws are all cut very deep and coarse, especially those of the center adjustment bows, to insure quick motion and to avoid the disagreeable stripping.

Superior Drawing Instruments—These instruments are similar in design to the Zenith Drawing Instruments. They are high grade in every respect, made of hard rolled nickel-silver and highest grade tool steel. Finest grade workmanship and finish.

Reliable Drawing Instruments—A very popular line of exceptional value. They are guaranteed to be perfectly assembled and nicely fitted to give satisfactory results. Made of hard-rolled nickel silver and tool steel.

Universal Drawing Instruments—These are of excellent design and exceptional value. With proper care will give long and satisfactory service. Made of hard rolled nickel silver and tool steel. For the purposes of the student or one having occasional need for drawing instruments this line is admirably adapted.

Marvel Drawing Instruments—A very popular line of exceptional value. Due to their low cost and excellent features they are very popular in manual training schools.

Banner Drawing Instruments—These are well built of good materials and workmanship, incorporating many of the refinements usually only found in better sets.

PEERLESS DRAWING INSTRUMENTS

No. 1600

No. 1601

No. 1602

No. 1601C

No. 1604

No. 1608

- | | | |
|---|---|---------------|
| | | Code Word |
| No. 1600. | Ruling Pen, spring blade, metal handle, 4½ inch. | MIAD |
| No. 1601. | Ruling Pen, spring blade, metal handle, 5 inch. | MIARE |
| No. 1602. | Ruling Pen, spring blade, metal handle, 5½ inch. | MIATER |
| No. 1601C. | Ruling Pen with cross joint, metal handle, 5 inch. | MIBEE |
| The cross joint is a simple construction for rapidly opening and cleaning the pen. Maintains adjustment for width of lines without altering. | | |
| No. 1604. | Ruling Pen with graduated thumb screw, metal handle, 5½ inch. | MIBERT |
| The thumb screws on Pens No. 1604 are divided into 20 divisions, each alternate one marked with figure. One whole turn equals 1 m/m of width of line. The best arrangement for readjusting to width of line after cleaning. | | |
| No. 1608. | Ruling Pen for fine lines, metal handle, 5 inch. | MIBETH |
| Pens No. 1608 are excellent for very fine line work. Easily sharpened by merely grinding the slant. | | |

POLAR PLANIMETERS

No. 2010

No. 2010. Polar Planimeter, similar to No. 2005, but with special arrangement for rapidly finding the mean height of indicator diagrams (see explanation below). Range: Circle 25 in. in diameter; length of diagrams 2.8 in. In neat velvet-lined case, with instructions. Each.....Code Word, **SAFFRON**

Arrangement for Finding the Mean Height of Indicator Diagrams

This arrangement consists of two steel points (protected by metal caps when not in use) as shown in the adjoining illustration one attached to the top of the tracer arm, the other to the top of the carriage.

To obtain the mean height of the diagram, hold the instrument upside down, and by shifting the slide on the bar, adjust the two steel points so that they coincide exactly with the length of the diagram. Then place the planimeter without altering the relative position of slide and bar in the usual way upon the drawing—needle point outside the diagram—and follow the outline of the diagram with the tracing point. The difference of the readings at the beginning and at the end of the operation divided by 0.4 will be the mean height of the diagram, expressed in inches.

Example: Second reading 2.361
 first reading — 1.913

0.4) 0.448 = 1.12 ins. = mean height.

If the diagrams for up and down stroke are measured jointly, divide by 0.8 instead of 0.4.

Mean pressure = Mean height \times Scale of spring of indicator. Supposing the scale of the spring in the above example is 1" = 80 lbs. per sq. in., then

$$\text{Mean pressure} = \frac{0.448 \times 80}{0.4} = 89.6 \text{ lbs. per sq. in.}$$

The number of pounds per inch of height being usually a multiple of 4, the arithmetical work is thus extremely simple.

SEE PRICE LIST IN BACK OF CATALOG

COMPENSATING POLAR PLANIMETERS

On these instruments the tracer arm is graduated, and settings can very accurately be made for any scale, either U. S. standard or foreign measurement, and allowances can be made for any shrinkage of the paper. The tracer arm also bears proportion marks for a number of scales for inches and metric measurements.

Compensating Planimeters Nos. 2020, 2021 and 2022 are in two separate parts: one is the tracer arm with measuring and recording wheels, the other the polar arm, having the pole weight at one end and a steel ball at the other, which forms a ball joint with the carriage. The ball joint cannot become loose or shaky, nor is it liable to be injured when adjusting the tracer arm or during shipment, as each part is stored in the case separately. This construction gives the tracer arm a motion of 180° in either direction, therefore the range of these instruments is much greater than that of the ordinary planimeters.

The pole is so constructed as to combine the advantages of the pole plate and the needle point, as the point need not be pressed into the paper and may be used for setting the roller to zero without touching the measuring roller.

By measuring a diagram with the pole on the right, and then on the left side of the tracer arm, and taking the mean of the readings, all errors of the instrument are compensated.

No. 2020

Code Word

No. 2020. Compensating Polar Planimeter, nickel silver and bronze, adjustable tracer arm for vernier unit of .01 sq. in. on a scale of 1:1, pole arm about $7\frac{1}{2}$ inches with improved pole weight. Complete with testing rule, in morocco velvet-lined case, with instructions. **SAGAS**

COMPENSATING POLAR PLANIMETERS

No. 2021

Code Word

- No. 2021.** Compensating Polar Planimeter, nickel silver and bronze, adjustable tracer arm, fully graduated, fitted with vernier and micrometer for accurate settings, in U. S. Standard or foreign measurements. Allowance can also be made for shrinkage of drawings. Pole arm about $7\frac{1}{2}$ inches with improved pole weight. Complete with table of settings and testing rule, in morocco velvet-lined case, with instructions..... **SAGUM**

THE ADJUSTABLE POLE ARM

No. 2022

The adjustable pole arm, extending to about 13 inches, bears index marks for the different settings furnished with the instrument, and can be adjusted so that when the instrument is used with the pole inside of a figure, the constant is a round number, 20,000 for any setting. The instrument is used in the same way with the pole inside as with the pole outside, and by tracing the figure with the pole on the right and on the left of the tracer arm (about 13 inches) and taking the mean of the readings, large areas can be measured with great accuracy. The extensibility of the pole arm and the great range of the tracer arm permit of measuring very large figures with the pole outside. By reducing the length of the pole and tracer arms, the instrument can be used in a very small space.

ROLLING PLANIMETERS

No. 2030

The Precision Rolling Planimeter has an angular motion of about 90 degrees. The two rollers are made of exactly equal diameters, insuring a motion of the instrument, as a whole, in a straight line. The area of a figure of any length, the width of which does not exceed the length of the extended tracer arm, can be measured in one operation.

No. 2030. Precision Rolling Planimeter, German silver and bronze, adjustable tracer arm 10 inches long, fully graduated, with 8-in. telescoping extensions. In morocco velvet-lined case, with testing rule, instructions. Each.....Code Word, **SALTANT**

ROLLING DISC PLANIMETER

No. 2032. Precision Rolling Disc Planimeter, German silver and bronze, adjustable tracer arm full graduated, 12 inches long, telescoping extension 10 inches long with micrometer adjustment, adjustable for values of the vernier unit from 0.0032 square inch to 0.0005 square inch. Distance between rollers of carriage is $6\frac{3}{4}$ inches. Disc of aluminum is paper covered and mounted on a vertical axis which can easily be turned between two pivots. The maximum area measured in one operation is a rectangle of any desired length, but width not exceeding the length of the extended tracer arm. Testing rule and table of settings, in morocco case.Code Word, **SALTO**

CAMERA LUCIDA

AN INSTRUMENT OF GREAT VALUE TO THE ARTIST, ARCHITECT,
ENGINEER, NEWSPAPER AND ADVERTISING SPECIALISTS
AND STUDENTS

The Camera Lucida is useful for any kind of drawing.

Enlargements (up to 36 times when the rod is at its full length) and reductions can be made from nature or from documents.

The pencil point is clearly seen, and the special cutting of the silvered prism makes it twice as luminous as the old.

The angle of sight is 90° instead of the old 45° . This allows the highest points above the line of horizon to be drawn as well as the ground or first plan.

The reflection on the paper is perfectly steadied by the interposition of the lenses (12 different focuses). These suppress the parallax.

Photographs may be enlarged or reduced, and at the same time corrected, if the vertical lines are converging.

Reversed drawing for **Etchings, Engravings** and **Lithographs** is also a great feature; it does away with the looking glass, and saves much time, as the copy is reversed with the right to the left.

Painters and designers can outline with exactitude the most complicated lines of perspective, scenery, or even a living model can be sketched in a few moments, reducing much work to the illustrator.

Portrait painters are guided to the correct pose, which is a first condition of success.

Architects can rapidly draw a sculpture or enlarge the photograph of a monument, and can copy to a scale the most complicated geometrical drawings without searching.

Industrial designers of fashions, furnishing, jewelry, etc., will save much time by using this camera.

Engineers and surveyors will find it most useful for copying maps, plans, or any document, to any scale.

For amateurs, it provides a charming pastime for in and out of doors, without previous study.

No. 2101C. Camera Lucida with three draw telescopic slide bar, the last with rack and pinion movement, nickel finish; fullest length, 25 inches, and 12 lenses of different focuses; complete in black leather case, lined with velvet and silk; size, $11 \times 2\frac{1}{4} \times 1\frac{1}{4}$... Code Word, **SATURN**

No. 2101D. Camera Lucida with one draw telescopic slide bar in polished brass fullest length 20 inches, and 12 lenses of different focuses; complete in waxed walnut box, green cloth lined, spring clasp; size $11\frac{1}{4} \times 2\frac{1}{2}$, Code Word, **SATYR**

THE UNIVERSAL DRAFTING MACHINE

Cut shows Mid-Anchor Machine

The Universal Drafting Machine consists of two parallelograms, a protractor, and a square having graduated ruling edges. The blades of the square are interchangeable for all graduations.

The two parallelograms joined together constitute an arm which, anchored to the board, gives the protractor and square a parallel motion about the drawing. This form of parallel motion permits either zero on the ruling edges to be instantly placed at any point on the drawing, by a single direct movement, and a line being drawn along the graduated ruling edge, just the exact length required.

A conveniently arranged protractor permits the square to be set at any angle, and it then has the same parallel motion about the board as when set at zero. Machines are furnished with either of the three following protractors.

STANDARD PROTRACTOR. Has graduated arc allowing square to be set at any angle, and is provided with automatic stops allowing the square to be instantly set at 30°, 45°, 60° and 90°, without stopping to read or clamp the protractor.

ARCHITECTURAL AND STRUCTURAL PROTRACTOR. Special graduations are added to this protractor giving one-fifth, one-fourth and one-third roof pitches each way from zero, also special graduations to give two inches to the foot each way from zero.

CIVIL ENGINEERS' PROTRACTOR. This protractor has two independent swinging motions, the same as on a transit. The protractor is graduated to one-half degrees and the vernier reads to minutes. With the aid of this protractor it is a simple matter to duplicate work (done in the field) on the drawing, directly from the field notes.

HARDENED JOINT AND SOLID ROD DRAFTING MACHINES

The Hardened Joint Solid Rod Drafting Machine is a development from the original construction of the Drafting Machine. Hardened, ground and polished straight cylindrical pins working in hardened, ground and polished bearings form the bearings of this machine, and if kept properly lubricated and free from dirt they will give many years of good service with no perceptible wear.

BALL BEARING TUBULAR ROD DRAFTING MACHINES

The Ball Bearing Tubular Rod Drafting Machine is an achievement that makes the Drafting Machine practically ideal. It has absolutely no play in the bearings and is frictionless. It is light in weight and possesses great rigidity, and is exceedingly accurate, and the motion is smooth and light.

Complete booklet fully describing Universal Drafting Machines and accessories mailed on application.

THE JUNIOR DRAFTING MACHINE

The Junior Drafting Machine is a most convenient means for making small drawings at your desk, in the shop, at home, or when away on a trip.

This machine is designed to be used on a 22x28 drawing board, and its ordinary working capacity is 18x24 inches, although it will cover almost the entire board.

The protractor is graduated to degrees, is made of german silver, has automatic stops for the zero, 30, 45, 60 and 90 degree angles both ways. The square may be swung through 180 degrees and may be clamped at any angle.

The same scales may be used with this machine as on the larger machines, although the short lengths are preferable.

LIETZ DRAFTSMEN'S SCALES

ZENITH QUALITY

Boxwood-White Edge-Cel-O-Met*

Lietz Zenith Draftsmen's Scales are manufactured by us of the very best selected materials. Constructed of the proper size and proportion, they are machine divided to United States standard measurements and the graduations are fine and clear and deeply cut. They are made in a variety of shapes, described as follows:

Triangular Scales, Regular Shape. This type of scale has the advantage of possessing six surfaces and affords the greatest range of scales.

Triangular Scales, Improved Shape. Like the regular shape, possesses six surfaces, but the concaved facet shape affords a better contact with the drawing and allows a better angle of vision. It prevents the divisions from wearing off by friction.

Flat Scales, Regular Shape. The regular shape flat scales have two bevels for graduations. The graduations are more conveniently read than on the triangular scales.

Flat Scales, Double Bevel. These scales have four bevels for graduations, but this shape necessitates the raising of the scale to bring the edge in close contact with the paper.

Flat Scales, Opposite Bevel. This type of scale is an improvement on the regular flat scale as it presents but one graduated bevel to the eye. It is easily picked up or turned.

SCALES MADE TO ORDER

We are equipped to furnish special scales of all kinds, and in order to avoid mistakes or delay in prolonged corresponding we offer the following suggestions when ordering special scales:

1—State whether Boxwood, White Edge on Boxwood or Cel-O-Met Scale is wanted.

2—State shape scale is to be. (See above.)

3—State length of scale wanted.

4—How each edge is to be graduated. State whether to be Open Divided or Full Divided.

5—State how each edge is to be numbered, from left to right or right to left or both ways.

It is advisable when ordering special scales to furnish us a sketch. This need not be accurate. All that is necessary is to show the divisions as you want them, the length of the various graduation marks, and the numbering as it is wanted.

*For description of Lietz Cel-O-Met Scales see page 304.

LIETZ CEL-O-MET WHITE-EDGE SCALES

Trade Mark.

Patent applied for.

Dural Metal Body. White Celluloid Edges

Lietz CEL-O-MET Draftsmen's Scales are the result of many years experimental work by our research department. They represent a distinct improvement over box-wood scales. Lietz CEL-O-MET Scales have a body constructed of dural metal, with recessed beveled edges to which white celluloid strips are permanently attached. Lietz CEL-O-MET Scales therefore are not affected by moisture and other climatic changes.

Lietz CEL-O-MET Scales combine three of the most desirable features of a scale in one; namely, **Permanency, Accuracy and Visibility.**

PERMANENCY—The metal body of Lietz CEL-O-MET Scales will retain its shape and will not bend, twist or change in length. It will withstand rough usage and climatic conditions will not affect it. The white celluloid edges are permanently attached by a special method evolved in the Lietz laboratory.

ACCURACY—The main body of Lietz CEL-O-MET Scales being of metal, the graduations maintain a permanent accuracy.

VISIBILITY—The perfect contrast between the black figures and graduations and the white background of the celluloid offers perfect visibility and easy reading. It reduces eyestrain and eliminates all glare which is so common on other types of metal scales where the graduations are made directly on the metal.

Other advantages—The under bearing surface of Lietz CEL-O-MET Scales is slightly concave. Consequently, contact with the paper is only along the edges of the scale, reducing area of contact and resulting friction. This feature overcomes smudging of the paper so common with scales having flat bottoms. The celluloid edge assures the draftsman that the pencil lead will not be cut if he uses the edge of the scale for drawing or marking.

Finish—Lietz CEL-O-MET Scales are attractively finished. The metal center has a satin silver finish; the edges are pure white and the graduations are clear, distinct, permanent and accurate.

STANHOPE

THE ZENITH SLIDE RULE

Best Quality

Adjustable

The Zenith Slide Rule has in addition to the regular scales of the Mannheim Rule a scale of cubes and an inverted scale through the center of the slide. These scales may be used in connection with the others, by means of the indicator. The inverted scale enables taking three factors at one setting of the slide, and reading reciprocals by means of the indicator. Almost any combination of three factors involving square, square root, cube and cube root may be solved at one setting of the slide.

Rules are engine divided on white celluloid facings. The divisions are clear, distinct, permanent and accurate.

THE ELECTRIC SLIDE RULE

Especially evolved in response to a demand for a suitable Slide Rule for Electrical Engineers and for students in Electro-Technology.

Serves in an excellent manner the facility of calculation of all electro-technological problems. The table of constants, on the reverse of the rule, makes the reference to hand-books almost superfluous.

Engine divided on white celluloid facings. The divisions are clear, distinct, permanent and accurate.

No. 3034. 10-inch Electric Slide Rule, in morocco case with directions.

Each.....Code Word, **STELLATE**

HAZEN-WILLIAMS HYDRAULIC SLIDE RULE

No. 3044

The Hazen-Williams Hydraulic Slide Rule is used principally for determining the velocity and quantity of the flow of water in pipes and channels, but is also adapted for ordinary slide rule calculations. Special computations may also be solved by its use, as, for instance, to determine the corresponding flow at any other slope or head, when the flow of water through a pipe or system of pipes produced by a given slope or head is known; to find what size of pipe must be used to produce the same discharge for any other slope, when the discharge in a given size of pipe at a given slope is known; to compute the discharge through a compound pipe, that is, a pipe of larger diameter connecting with a pipe of smaller diameter, or a series of such pipes; to compute the friction of a given amount of water flowing through two pipes of different diameters and different lengths, freely connected at each end; to get with one setting of the slide the quantity of water corresponding to any slope; to get with one setting of the slide the quantities of water discharged by pipes of different sizes for a given slope and coefficient. In size and general appearance the rule is like an ordinary Mannheim 10-inch slide rule. On the back of the rule are several tables to aid in the convenience of computations to which the rule is applicable. Engine divided on white celluloid facings. The divisions are clear, distinct, permanent and accurate.

No. 3044. 10-inch Hazen-Williams Hydraulic Slide Rule, in morocco case, with directions.....Code Word, **STEREO**

SEE PRICE LIST IN BACK OF CATALOG

THE DOUBLE MULTIPHASE SLIDE RULE

Front

Back

Code Word

- No. 3054. Double Multiphase Slide Rule, 10 in. Engine divided on white celluloid facings. With double indicator in morocco case with instructions..... **STICCADO**
- No. 3054L. Same as No. 3054 in sewed leather case..... **STILETTO**

The Double Multiphase Slide Rule is graduated on both sides with several special scales which the single face slide rules do not have. These scales in connection with the usual logarithmic scales and inverted scale make this rule valuable in the solution of problems involving exponentials, reciprocals and multiplication involving several factors. Being graduated on both sides, involved computations can be made with a minimum number of settings as the indicator circles the rule thus making it possible to read any scale in connection with any other scale.

The Double Multiphase Slide Rule has the following scales:

DF, a folded D scale. (The graduations begin and end near the middle of the scale with the division 3.1416 in line with the D scales indexes.)

CF, a full length C scale, folded like the DF scale.

CIF, a full length inverted folded C scale.

C, a full length C scale.

D, a full length D scale.

On the other face of the rule are the following scales:

K, a scale consisting of three complete logarithmic scales. (Used in connection with the D scale for cubes and cube roots.)

A, two complete logarithmic scales (used in connection with the D scale for cubes and cube roots.)

B, similar to the A scale.

S & T, the usual trigonometrical scales of sines and tangents.

CI, a full length C scale inverted.

D, a full length regular D scale.

L, a scale of equal parts (for finding logarithms of numbers.)

SEE PRICE LIST IN BACK OF CATALOG

DOUBLE MULTI-LOG SLIDE RULE

Front

Back

No. 3056L. Double Multi-Log Slide Rule, 10 inches. Engine divided on white celluloid. With double indicator, in sewed leather case. This rule is similar to our No. 3054L, but has, in addition, the Log Log Scales.

.....Code Word, **STIMAN**

The Double Multi-Log Slide Rule has the following scales:

K, a standard logarithmic scale of three units for reading cubes and cube roots directly.

A, a standard logarithmic square scale divided 1 to 100 for reading squares and square roots.

B, same as A, logarithmically divided 1 to 100.

CI, a standard C scale inverted. When used with C scales gives reciprocals by hairline, including confunctions (trig.).

C, a logarithmic scale divided 1 to 10 for multiplication and division when used in conjunction with D scale.

D, same as logarithmic C scale. When used with A scale gives the squares and with K gives the cubes.

T, gives tangent of θ angle directly from θ scale by use of hairline. Trigonometric function read directly up to 84.5° , as sines read directly up to 90° .

On the other face of the rule are the following scales:

θ , a trigonometric scale decimally divided to degrees and tenths of degrees. This scale is of special interest to the engineering field as trigonometric functions are read directly to 90° when used in conjunction with P, T, or Q scales.

R θ , a standard radian scale giving radians and percentages thereof, of θ angles.

P, a decimally divided sine scale, for directly solving $\sqrt{a^2 \pm b^2}$

Q, a decimally divided cosine scale, used with P scale.

Q', this is an extension of Q scale, used with P scale.

C, this is a single logarithmic scale divided 1 to 10.

LL1, LL2, LL3, Continuous Log Log Scales in three parts.

THE DOUBLE MULTI-LOG SLIDE RULE

with
New Patented Gudermanian Scale

Front

Back

Code Word

No. 3057L. Double Multi-Log Slide Rule, 10", engine divided on white celluloid facings, with double indicator, in sewed leather case, with instructions.....**STIMASH**

This rule is similar to our No. 3056L but has the following additional scales:
L, an equal parts scale, used with D scale to secure directly, the logarithm of any number.

G θ, a new patented Gudermanian (theorem) Scale. Reads directly $\sinh \theta$, $\tanh \theta$, $\operatorname{gd} x$, also hyperbolic cofunctions $\cosh \theta$, $\coth \theta$ and $\operatorname{cosech} \theta$.

THE SLIP-LENS MAGNIFIER

The Slip-Lens Magnifier is instantly attached to the slide rule indicator by slightly moistening its underside. It will instantly adhere to the indicator glass but can be moved up or down without taking it off the indicator. It magnifies the graduations about twice the actual size evenly and clearly in all directions. It need not be centered on the hair line but will give accurate reading from any position on the glass runner.

THE MIDGET CIRCULAR SLIDE RULE

No. 3077

A most versatile calculator constructed entirely of metal and celluloid; therefore, practically indestructible; 4" in diameter; will solve any problem in multiplication, addition, subtraction and proportion; gives all possible roots and powers of numbers. The "Trig." scales give the Sines, Cosines, Tangents and Cotangents from 0 to 90 degrees and the angle can be read to 1/10 of a degree or to 1 minute, whichever is desired. Fractions and mixed numbers can be added and subtracted direct.

No. 3077. Midget Circular Slide Rule 4" in diameter with instructions, in durable fabrikoid case. Code Word, **SUALL**

APEX CIRCULAR SLIDE RULE

The scales on this rule are similar to those on No. 3077 Midget Slide Rule. The Apex Slide Rule is 8" in diameter and the C scale is more than 25" long and permits reading with great precision.

No. 3078. Apex Slide Rule, 8" in diameter, with instructions. Code Word, **SUARY**

COMMERCIAL CALCULATOR

No. 3079

The Commercial Calculator quickly solves the large number of mathematical problems that come up daily in every office. Problems of interest, per cent of profit, freight rates, cost estimation, wages, percentages and proportion can be quickly solved on the Commercial Calculator. Made entirely of metal and celluloid, it is practically indestructible; diameter 5".

No. 3079. Commercial Calculator, 5" in diameter, complete with instructions.
Code Word, **SUATE**

SEE PRICE LIST IN BACK OF CATALOG

THE MERRITT BEAM SCALE

For computing the strength of steel beams.

No. 3097

Absolutely accurate. Adapted to all conditions. Load, spacing, span, etc., found instantly. Mistakes absolutely eliminated.

The Merritt Beam Scale for computing the strength of steel beams is based on the principle of the Engineer's Slide Rule and was designed to simplify computations of this kind, and to eliminate all chance of errors. Tables and formulae are absolutely unnecessary when the Merritt Beam Scale is used, and the speed with which answers to widely varying problems may be solved can hardly be appreciated by anyone who has not had the pleasure of using it.

No. 3097. Merritt Beam Scale, on heavy bristol board.....Code Word, TABARD

THE WAGER TIMBER SCALE

For computing the strength of wooden beams.

No. 3098

For computing the strength of wooden beams. Absolutely accurate. Adapted to all conditions. Load, spacing, span, etc., found instantly. Mistakes absolutely eliminated.

To illustrate the simplicity of the Scale the following is given:

How far apart shall 6 in. x 12 in. timbers of white oak be placed to safely support a load of 150 pounds per square foot, the span being 18 feet, and New York law governing the design?

Select the fibre stress for white oak allowed in New York City (given on back of scale: 1000 pounds). Place 12 in scale B below 6 in scale A. Place 1000 in scale E over 150 in scale F. Above 18 in Scale D read 2 ft.-0 in. in scale C.

The Wager Timber Scale, for computing the strength of wooden beams, contains more information than could be given in 500 pages of tables. It is based on the principle of the Engineer's Slide Rule, and five minutes' inspection will convince anyone that it is simplicity itself.

No. 3098. Wager Timber Scale, on heavy bristol board.....Code Word, TABINET

STADIA COMPUTORS

COX STADIA COMPUTOR

The Cox Stadia Computer is a circular slide rule of about fifteen inches effective length. The fixed outer scale, or base, is graduated to the logarithms of numbers from 1 to 1000. The movable inner disc, concentric with it, is graduated on a portion of its circumference to the logarithms of one-half the sine of twice the angles from 3 min. to 45 deg., and inscribed "Difference in Elevation." Another portion of its circumference is graduated to the logarithms of the cosine squared of the angles from 0 to 45 deg., and inscribed "Hor. Distance."

Printed on heavy celluloid, size $5\frac{7}{8} \times 5\frac{7}{8}$ inches, suitable for carrying in coat pocket.

No. 3104. Cox Stadia Computer.....Code Word, **TABOR**

STADIA SLIDE RULES

Code Word

- No. 3110. Stadia Slide Rule, engine divided, 10 in., white facing, glass indicator, in morocco case.....**TALARIA**
- No. 3111. Stadia Slide Rule, like No. 3110, but 20 in., in morocco case.....**TALIPES**

When the stadia rod reading and elevation of the telescope are known the horizontal distance and vertical height can in every case be obtained at once by one setting (always to the left) of the slide. The rule can also be used for ordinary computations as the under side of the slide has a scale corresponding to the lower scale of the rule and resembling the A and B scale of the ordinary Mannheim rule. Directions are printed on the rule.

THE AMES LETTERING INSTRUMENT

Fig. 1

Fig. 3

The Ames Lettering Instrument is the only instrument of its kind that has holes spaced for three different systems of guide lines. The vertical height between the guide lines may be regulated by swiveling the disc in the frame.

The AMES LETTERING INSTRUMENT is used for reducing the time consumed in placing guide lines on drawings when lettering titles and notes. This device consists of a nickel-plated, tempered steel frame, which retains a transparent celluloid disc that may be swiveled in the frame. The disc has three parallel rows of tapered holes, which furnish a means for quickly drawing guide lines without the necessity of first locating them by means of a scale. **Slanting lines** for letters may be quickly drawn by placing the instrument with the open and closed end in contact with the straightedge. (See Figure 3.)

No. 3194. Price of Ames Lettering Instrument....Code Word, **THECA**

SEE PRICE LIST IN BACK OF CATALOG

TRANSPARENT LETTERING ANGLES

No. 3195

No. 3196

Lettering angles are designed to give a quick and easy method of making accurately spaced guide lines for lettering of drawings. There are 6 columns of holes, the figure under each column denoting the height of the standard capital letters in thirty-seconds of an inch. Practically any desired spacing or guide lines may be obtained by inserting the pencil point through the proper series of holes and sliding the angle along the T-square. The $67\frac{1}{2}^\circ$ slot is useful for obtaining uniform slope lines. The beveled pick-up makes the lettering angle very easy to handle.

No. 3195. Transparent Lettering Angles, 30x60 degrees.

MECHANICAL ENGINEERS' TRIANGLES

No. 3197

Mechanical Engineers' Triangle, No. 3197, has a series of accurately machined circular and hexagonal beveled openings ranging in size from $\frac{1}{8}$ " to $\frac{3}{4}$ ". When using short side of the triangle against a straightedge, these openings are accurately aligned so that by moving the triangle along the straightedge the circles can be inscribed in the hexagons; and in this manner bolt heads, nuts, etc. can be quickly and accurately drawn; whereas concentric circles, washers or screw heads can be quickly made when using the long side of the triangle. There are also ten groups of beveled slots for obtaining guide lines for lettering and the inner hypotenuse represents a $67\frac{1}{2}^\circ$ angle for obtaining uniform slope line.

No. 3197. Transparent Celluloid Mechanical Engineers' Triangle, 30x60 degrees, 9".

COLLINS CELLULOID CIRCULAR CURVES FOR HIGHWAY ENGINEERS

These curves
are also made
in even foot
radius sets,
or graduated
in inches.

These Curves
made to order
in any group
of radii
desired.

Collins Celluloid Circular Curves are accurately cut on the Harger & Bonney radius, which is 5730 feet for a 1° curve, and all others in direct proportion. All curves are cut to a scale of 1 inch = 100 feet and are designated by degrees as shown by illustration.

They are invaluable for projecting on topography, and for platting and inking purposes, practically eliminating the use of a beam compass.

This set consists of 27 Curves, which cover all practical requirements and needs in Highway Engineering.

No. 3285. Set of 27 Transparent Celluloid Highway Curves, in mahogany box.

.....Code Word, **TREFOIL**

No. 3286. Set of 30 Collins Highway Curves, made of transparent celluloid, in even foot radii as follows: 5000, 4000, 3000, 2500, 2000, 1500, 1200, 1000, 850, 800, 750, 700, 650, 600, 550, 500, 450, 400, 375, 350, 325, 300, 275, 250, 225, 200, 175, 150, 125, 100 feet.Code Word, **TREGER**

LIETZ ZENITH PARALLEL ATTACHMENT

Patented

No exposed pulleys. Metal conduit reinforces blade.

Room on Drawing board for tools.

No. 3425.

Lietz Zenith Parallel Straightedge

The Lietz Zenith Parallel Straightedge is a simple and improved method of drawing parallel lines. It is rapidly attached to the drawing board. There are only two pulleys as compared to numerous ones on other straightedge attachments and the cord passes from one end of the straightedge to the other through the metal conduit attached to the blade. The Lietz Zenith Parallel Straightedge has the advantage in that it can be secured to any drawing board longer than the straightedge, leaving room on the drawing board for tools and drafting equipment. As the straightedge does not protrude beyond the edge of the board it cannot be disarranged or accidentally struck by anyone passing. This device is so constructed that it cannot accidentally slip. Still, it is possible to quickly adjust the straightedge to the drawing. The Lietz Zenith Parallel Straightedge can be quickly transferred from one drawing to another, whereas most of the forms of parallel rule attachments are permanently attached to the table to which they are fitted.

No. 3425. Lietz Zenith Parallel Attachment complete with maple transparent celluloid lined straightedge.

ADJUSTABLE METAL DRAWING BOARD EDGE

No. 3433

No. 3433. Adjustable Metal Drawing Board Edge. This consists of a metal T-rail, or straightedge with attachments to secure it to end, or end and side of drafting board or table. These are ground perfectly straight and are nickel plated. The T-square used against this insures more accurate results than can be obtained by working against wooden board or table.

Size, inches—

24 30 36 40 48 60

Code Word..... **TURNDUN**

A cam device at the end permits fine adjustments in forming a perfect right angle when two of the metal T-rails are used together.

DRAWING KITS OR SKETCH BOARDS

Our Drawing Kits consist of a well-seasoned, rigidly constructed white pine drawing board, a T-square and a 45 degree and 30x60 degree celluloid triangle. When not in use the triangles and T-square are firmly held in place underneath the drawing board. This is an excellent outfit for outdoor sketching and for students.

THE "FREMONT" COMBINATION DRAWING TABLE

No. 3486

The Fremont Combination Drawing Table meets every requirement of the draftsman and is especially popular because it may be put to general use when not needed for drawing. It is neatly finished and fits in with the other furniture of the home and apartment. The construction is light and strong and the table is collapsible and can be moved with ease and is also desirable for lecture work or outdoor sketching. The top is secured flat in a horizontal position, but may on a moment's notice be elevated to any slant for the convenience of the draftsman.

This table is sold without drawing board top as any drawing board No. 3440 can be used.

CELLO-CLIP MAP AND PLAN FILES

No. 3526

No. 3528

No. 3527A and B

No. 3527C

Cello-Clip vertical suspension is a practical method of filing large sheets either singly or in groups. It is not necessary to remove sheets for reference and they can always be found instantly. The Cello-Clip cabinets are made of heavy steel strongly reinforced. Cello-Clip racks are for vault installation and extra rod assemblies are available for filing more than one tier of drawings in cabinet. The Cello-Clip can be quickly and permanently fastened. The adhesive skirts grip the sheets tightly and will not slide off or tear.

LIETZ FOUR-POST DRAWING TABLES

The four-post tables listed on the following pages are built in our own factory and are constructed of the finest materials and workmanship.

The drawing board tops are made of narrow strips of thoroughly seasoned sugar pine, tongue and groove construction, with hardwood end cleats and heavy cleats underneath, fastened with screws passing through oblong washers which allow for contraction and expansion. Both sides of the boards are finished with one coat of varnish and the top surface is sanded smooth. They have a hardwood protection strip in front.

The bodies are built of best grade oak and finished in beautiful light golden oak. The hardware is of oxidized finish.

These tables are shipped knocked down. They can be quickly assembled and when set up and all bolts tightened are extremely rigid and solid.

THE "ALHAMBRA" DRAWING AND REFERENCE TABLE

No. 3535

Drawing Board in Vertical position may be raised or lowered for standing or sitting position.

Rear view showing reference top and drawer arrangement

The Alhambra is a two-man table. The drawing-board top is constructed of the finest quality selected sugar pine. It may be tilted from horizontal to vertical position and securely clamped. The top is quickly and easily raised and lowered by turning the hand wheel and it stays put wherever you stop without the use of clamps or ratchets. The adjusting mechanism consists of cut-steel gears enclosed in cast iron housing. The body is built of the best grade oak with golden oak finish. The reference table top is covered with desk linoleum, banded with oak strips. It and the drawers below are for the use of the draftsman immediately ahead of the man working on the drawing board, who in turn uses the table in his rear for the same purpose. (See illustration at bottom of page).

THE "NATOMA" ILLUMINATED TRACING TABLE

No. 3537

This table is 34 inches high with 3 inch raising blocks and has a top 36x48 inches with a plate glass tracing surface 24x36 inches set flush with the top. Reflector with aluminum finish and illuminated by 4 electric lights giving a perfect light for tracing the faintest lines on original copy and eliminating all shadows. Old blueprints and other indistinct drawings can be traced without difficulty.

SECTIONAL FILING CASES

No. 3545

A cabinet for the protection and filing of your drawings, blue prints, specifications, maps, photographs, etc., is one of the most necessary articles of equipment in a drafting room, and the sectional style is by far the most popular, as it can be made to grow as your business grows.

It is built on the same plan as the well-known sectional bookcases, and is always made uniform in size and finish so that any number of sections, procured at different times, will fit perfectly.

Construction

These units are made of well-seasoned and thoroughly kiln-dried oak. The drawers are constructed with dovetailed joints. They slide in grooves, there being no rails between them. The back of each drawer is covered for a space of four inches with a thin strip to prevent drawings from curling up. Sections are held in place by means of a half-round projection on the back of the section, which the cuts do not show; and this fits into the upper section, and the front rails are bolted together. Bolting in this way prevents the rail from sagging and catching on the drawer below.

Style A

Style D

Style B

Style E

Style C

All units are furnished with Style A Drawers, unless otherwise specified.

Hold-down Wires not furnished unless ordered.

The construction of our blue print drawers has been greatly improved. The bottoms are made with two separate panels of three-ply veneer which rest in grooves in a center support. These grooves allow for contraction and expansion so that the panels will not warp. Three-ply veneer is the strongest construction known to woodworking science for drawer bottoms.

The drawers are constructed with dovetailed joints and slide in grooves, there being no rails between them. The back of each drawer is covered for a space of four inches with a thin strip to prevent drawings from curling up.

STEEL SECTIONAL PLAN DRAWER UNITS

These new Plan Drawer Units are fabricated to the highest standards of steel cabinet construction, and introduce many structural refinements that make them more efficient and convenient to use. A few of these features are illustrated on page 369 and described below.

ROLLERS—The drawers operate smoothly and easily on four oversize, case hardened rollers . . . an added feature that increases the service life and convenience of these units. The front two are ball bearing, assuring silent operation.

COMPRESSOR—A lift compressor at the front of the case keeps the drawings and tracings in perfect order . . . prevents curling or tearing at the edges . . . and makes it easier to refer to the individual drawings.

HARDWARE—The label holders and drawer pulls on these units are of solid bronze of attractive design.

STOPS—Gravity stops are provided for each drawer to prevent the accidental removal of the drawer.

HOOD—Each drawer is provided with a hood at the rear to prevent the tracings from curling up, becoming crumpled or torn. This feature enables you to also use the drawer to full capacity without danger of damaging tracings.

STEEL SECTIONAL PLAN DRAWER UNITS

These cabinets are made of the highest grade furniture steel. All parts are electro-welded together assuring durability and lifetime of wear. Exceptionally rigid frames assure perfect alignment of drawers. Available in five drawer, three drawer and one drawer units. All sections are interchangeable and may be placed on top of the other. Either a sanitary or closed base may be used. Furnished in three different sizes—36"x24", 42"x30" and 48"x36".

DRAWER SPECIFICATIONS

Unless otherwise specified, these units will be furnished with Style 1 drawers. When drawers with compartments are required as shown in Styles 2 to 5 inclusive, order by style number. Complete specifications follow.

INK BOTTLE HOLDERS

No. 3635

NEW DRAFTSMEN'S INKSTAND

This accessory enables the draftsman to fill his pen in the shortest possible time, and by the use of one hand alone, leaving the other at liberty to hold the T-square, triangle, etc. It will serve as a paperweight and the stand being sufficiently heavy offers a stability the need of which is so strongly felt when working without a holder for the bottle. Provided with an automatic stopper, most efficient in preventing evaporation, and the new form of dipper will instantly and positively deliver an ample and uniform charge with no tendency whatever to ink the outside of the blades. Made of cast iron, japanned.

No. 3635. Improved Draftsmen's Pen-filling Inkstand with adjustable filler stem.

WRICO LETTERING GUIDES

Wrico Lettering Guides Will Produce Perfect Lettering with Less Effort and Greater Speed Than Any Other Lettering Device.

To use WRICO Lettering Guides effectively requires neither skill nor previous experience. No preliminary adjustments are necessary before the lettering can be done. The WRICO Lettering Pen is not a machine. It is a PEN that is held in the hand and **used in an easy and natural position.**

The Guides are grooved on the under side so that the ink will not be smeared when the Guide is moved from one character to another. The Guide is placed directly over that portion of the paper on which the lettering is to be done. This prevents distortion of the characters.

Every opening in the Guides is cut with extreme accuracy with the result that every letter, numeral or other symbol made is perfect.

It is because of the quality of the work and the economy effected by the use of WRICO Lettering Guides, that they are specified as standard equipment in almost every drafting room and office where lettering is done.

DEXTER PENCIL SHARPENER WITH SPECIAL DRAFTSMEN'S CUTTERS

No. 3849DC

No. 3849DC. Same as No. 3849, but with special draftsmen's cutters....

The draftsmen's cutters are specially ground to cut away the wood only, as shown in illustration, leaving the lead exposed, which may be pointed on file or sandpaper to suit the requirements of the user.

EXTRA CUTTERS AND CLAMPS

Replacing Dull Cutters

All Pencil Sharpeners will produce thousands of points before the cutters become dull. However, no steel edge can indefinitely withstand cutting through lacquer, enamel, wood, glue and graphite, all of which form a lead pencil. In time the edge becomes dull and to obtain the best service from your pencil sharpener, the cutters should be replaced. New cutters are easily inserted and are nominal in cost.

MOTOR DRIVEN ERASERS

No. 3905

The Seymour motor driven eraser is an article of quality designed to give long and satisfactory service.

The erasing and power elements are combined in one unit weighing less than two pounds.

In use the entire weight rests on the drawing surface. The machine is held at an angle of 45 degrees. With this machine a period may easily be removed without disturbing surrounding data. When the current is on the ease with which it can be operated is surprising.

The revolving motor armature produces a gyroscopic action which has a marked tendency to hold the device at the operating angle. In addition to this, the direction of rotation is such that the friction developed by erasing gives the handle a tendency to pull upward. This is counteracted by the weight of the motor held on the operating angle.

Since the whole hand grasps the handle and the weight is on the drawing surface, it is only necessary to guide the machine. No cramps to the fingers result from extended use.

The starting device and variable speeds are controlled by a slight movement of the thumb of the hand in which the machine is held.

The eraser holder is provided with a compression ring that slides over six beveled jaws.

SHOW CARD COLORS

Sargent Tempera and Water Resistant Show Card Colors are ground in a revolutionary colloid base, a homogeneous emulsion which produces excellent working quality. They are noted for their super-brilliance of pigments. They are non-settling and non-bleeding, of smooth consistency, free from grit, can be used with ordinary lettering brush or, when thinned down, with lettering pen or air brush.

Made in the following Colors:

White	Spectral Red	Turquoise Blue
Spectral Yellow	Maroon	Spectral Blue Green
Medium Yellow	Magenta	Dark Green
Dark Yellow	Spectral Red Violet	Spectral Green
Spectral Yellow Orange	Lavender	Emerald Green
Spectral Orange (Mineral)	Spectral Violet	Spectral Yellow Green
Orange	Royal Purple	Golden Brown
Spectral Red Orange	Spectral Blue Violet	Burnt Sienna
Vermilion	Dark Blue	Burnt Umber
Light Red	Spectral Blue	Black
Dark Red	Light Blue	Gray

No. 4150. Sargent's Show Card Colors, glass screw cap jars.

2 oz. 8 oz. 16 oz.

No. 4151. Sargent's Gold and Silver Show Card Colors, glass screw cap jars.

1 oz. 2 oz.

TOPOGRAPHIC MAPS

- No. 5000.** We carry the full line of Topographic Maps published by the United States Geological Survey for the States of California and Nevada, also Alaska. Each.....
Guide or Index Sheets sent on application.

SPECIAL MAPS PUBLISHED BY THE U. S. GEOLOGICAL SURVEY

- No. 5010. Oil and gas fields of the State of California.** Map printed on the southwestern portion of the base map of California prepared by the Bureau of Public Roads of the Department of Agriculture. Distinctive colors and symbols show the productive oil and gas fields, the main oil pipe lines, and the oil refineries in the State. Size, 44 by 49 inches. Scale, 1:506,880, or 8 miles to 1 inch.....
- No. 5012. Bakersfield, Cal.** This map shows part of Kern County. Limiting parallels, $35^{\circ} 22' 30''$ and $35^{\circ} 37' 30''$. Limiting meridians, $118^{\circ} 52' 30''$ and $119^{\circ} 07' 30''$. Size, $16\frac{1}{2}$ by 20 inches. Scale, 1:62,500, or about 1 mile to 1 inch. Contour interval, 20 feet.....
- No. 5014. Kern River Oil Field, Cal.** (Revised edition of Oil Center Special map). This map is printed in 2 sheets (north and south). North sheet, limiting parallels, $35^{\circ} 27' 30''$ and $35^{\circ} 30'$; limiting meridians, $118^{\circ} 56'$ and $119^{\circ} 02'$. South sheet limiting parallels, $35^{\circ} 25'$ and $35^{\circ} 27' 30''$; limiting meridians, $118^{\circ} 56'$ and $119^{\circ} 02'$. Size of each sheet, 20 by 33 inches. Scale 1:12,000, or 1,000 feet to 1 inch. Contour interval, 20 feet. Price of each sheet.....
- No. 5015. Lassen Volcanic National Park, Calif.** This map shows the Lassen Volcanic National Park. Limiting parallels, $40^{\circ} 25'$ and $40^{\circ} 35'$. Limiting meridians, $121^{\circ} 15'$ and $121^{\circ} 35'$. Size, 21 by 23 inches. Scale, 1:48,000, or 4,000 feet to 1 inch. Contour interval, 50 feet.....
- No. 5017. Naval Petroleum Reserve No. 1 (Elk Hills oil field), Calif.** This map shows the Elk Hills oil field in Tps. 30 and 31S., Rs. 23, 24, and 25E., Mount Diablo base and meridian. Size, 20 by 37 inches. Scale, 1:31,680, or one-half mile to 1 inch. Contour interval, 20 feet.....

SEE PRICE LIST IN BACK OF CATALOG

TOPOGRAPHIC MAPS

- No. 5018. Point Conception Sheet (North I 10) of International Map of the World.** This sheet is a ten-color lithograph representing the California coast adjacent to Point Conception. The altitudes of the land and the depths of the ocean are shown by contour lines and tints. Limiting parallels, 32° and 36° . Limiting meridians, 120° and 126° . Size 24 by 27 inches. Scale, 1:1,000,000, or, 15.78 miles to 1 inch.....
- No. 5020. Sacramento Valley, Cal.** This is a topographic map of the Sacramento Valley from Red Bluff to Suisun Bay. Limiting parallels, 38° and $40^{\circ} 15'$. Limiting meridians, 121° and $122^{\circ} 15'$. Size, 21 by 43 inches. Scale, 1:250,000, or about 4 miles to 1 inch. Contour interval, 25 feet.....
- No. 5021. Salton Sea and vicinity, Calif.** This map shows the Salton Sea and vicinity. Limiting parallels, $33^{\circ} 5'$ and $33^{\circ} 35'$. Limiting meridians, $115^{\circ} 32'$ and $116^{\circ} 7'$. Size, 40 by 40 inches. Scale, 1:62,500, or about 1 mile to 1 inch. Contour interval, 10 feet.....
- No. 5023. Sequoia and General Grant National Parks, Calif.** This map is composed of the Tehipite map and parts of the Kaweah, Mount Whitney, and Olancha maps, combined and printed as a single map. The boundaries of the parks are shown. Limiting parallels, $36^{\circ} 15'$ and 37° . Limiting meridians 118° and 119° . Size, 29 by 32 inches. Scale, 1:125 000, or about 2 miles to 1 inch. Contour interval, 100 feet.....
- No. 5024. San Francisco Bay Sheet (North J 10) of International Map of the World.** This sheet is a twelve-color lithograph representing San Francisco Bay and part of California and the Pacific Ocean adjacent to it. The altitudes of the land and the depths of the ocean are shown by contour lines and tints. Limiting parallels, 36° and 40° . Limiting meridians, 120° and 126° . Size, 24 by 25 inches. Scale, 1:1,000,000, or 15.78 miles to 1 inch.....
- No. 5026. Southern California.** This map is printed in 3 sheets. Sheet 1, limiting parallels, $33^{\circ} 30'$ and $34^{\circ} 30'$; limiting meridians, $116^{\circ} 30'$ and $118^{\circ} 30'$. Size, 20 by 33 inches. Sheet 2, limiting parallels, $32^{\circ} 30'$ and $33^{\circ} 30'$; limiting meridians, $116^{\circ} 30'$ and $117^{\circ} 45'$. Size, 20 by 22 inches. Sheet 3, limiting parallels, 34° and 35° ; limiting meridians, $118^{\circ} 30'$ and $120^{\circ} 45'$. Size, 22 by 36 inches. Scale of each sheet, 1:250,000, or about 8 miles to 1 inch. Contour interval, 250 feet. Price of each sheet.....
- No. 5028. Yosemite National Park, Cal.** The park limits established by the various acts of Congress are shown in colors. Limiting parallels, $37^{\circ} 30'$ and $38^{\circ} 15' 39''$. Limiting meridians, 119° and 120° . Size, 29 by 31 inches. Scale, 1:125,000, or about 2 miles to 1 inch. Contour interval, 100 feet.....
- No. 5030. Yosemite Valley, Cal.** Limiting parallels, $37^{\circ} 42'$ and $37^{\circ} 47' 05''$. Limiting meridians, $119^{\circ} 29' 11''$ and $119^{\circ} 43' 40''$. Size, 19 by 38 inches. Scale, 1:24,000, or 2,000 feet to 1 inch. Contour intervals, 50 feet...

SHEETS OF CONVENTIONAL SIGNS AND LETTERING

- No. 5040. Sheet of standard symbols.** Shows symbols and abbreviations adopted by the Board of Surveys and Maps of the United States Government, for use on Government maps; printed in five colors. Size, 18 by 30 inches.....

SEE PRICE LIST IN BACK OF CATALOG

MAPS OF THE UNITED STATES

- No. 5052. A wall map, 49 by 76 inches, in two sheets, on a scale of 40 miles to 1 inch, approximately, either with or without contours.
- No. 5054. A wall map, 40 by 62 inches, on a scale of 50 miles to 1 inch, on which is indicated by depth of brown and blue colors the relative heights of the land and the depths of the sea. The position of the principal cities and the boundaries of the states are shown.
- No. 5056. A map, 18 by 28 inches, on a scale of 110 miles to 1 inch, either with or without contours.
- No. 5058. A relief or hypsometric map, same size, scale as next above; elevations indicated by colors.
- No. 5060. A base map, 11 by 16 inches, on a scale of 190 miles to 1 inch.
- No. 5062. A base map, 8½ by 12 inches, on a scale of 260 miles to 1 inch.

POCKET STATE MAPS

- No. 5070. Pocket State Maps containing Commercial Index, giving towns, counties, populations and important features. .
(Specify name of state when ordering.)

CALIFORNIA COUNTY MAPS

- No. 5075. California County Maps, showing roads, trails, sections, boundaries, containing latest corrections and revisions.
(Specify name of county when ordering.)

COAST CHARTS AND BOOKS

We carry in stock a full line of charts and publications of the U. S. Coast and Geodetic Survey and the U. S. Hydrographic Office.

Much valuable information of use to the geologist and engineer can be obtained from these records.

Write us if interested.

WALL MAP RACKS

Made to Order.

No. 5080

We cheerfully give estimates on Map Racks. State number of maps rack is to hold and sizes of same, also if rack is desired in oak, mahogany or shellacked spruce.
